be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix[94] in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020[95] and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
Expected EU contribution per project	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
Indicative budget	The total indicative budget for the topic is EUR 5.50 million.
Type of Action	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

[94] A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

[95] Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix[96] and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).
