

## **HORIZON-WIDERA-2021-ERA-01-30: Implementation of a new macro-economic modelling concept**

| <b>Specific conditions</b>                  |                                                                                                                                                                                                                                                |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Expected EU contribution per project</i> | The Commission estimates that an EU contribution of around EUR 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts. |
| <i>Indicative budget</i>                    | The total indicative budget for the topic is EUR 1.00 million.                                                                                                                                                                                 |
| <i>Type of Action</i>                       | Research and Innovation Actions                                                                                                                                                                                                                |

Expected Outcome: Project results are expected to contribute to the following expected outcomes:

- Better integration of research and innovation activities in macro-economic models, leading to better measurement of their impact and a better understanding of the channels through which research and innovation lead to impact (direct and indirect) in Europe.
- Improved macro-economic modelling for the evaluation of R&I policy, at the different levels of policy intervention (EU, national, regional), and reinforced alignment between the development of models and policy use, for example in the context of assessing policy options.
- Reinforcement of the scientific community focused on the role of research and innovation in the EU economy based on macro-economic models and increased interactions between this community and policy makers in charge of R&I policy in Europe.

Scope: This action will operationalise the recommendations of the “Expert Group to advise on further development of the macro-economic modelling agenda” run during the period 2019-2020, which can be found in the report of the Group<sup>42</sup>. Based on these, it will implement a renovated macro-economic modelling concept to improve the treatment of R&I and R&I policies in macroeconomic models, by developing a modelling framework consistent with the most recent empirical evidence and the theoretical state of the art.

## **HORIZON-WIDERA-2021-ERA-01-32: Standardisation Booster for fostering exploitation of FP-funded research results**
