

HORIZON-WIDERA-2021-ERA-01-40: Modelling and quantifying the impacts of open science practice

Specific conditions

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional obligations regarding open science practices: Beneficiaries must ensure early and open sharing of the strategies, methodologies, models, and raw and analysed data deriving from their activities. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Structured evidence of scientific, societal and economic impacts of open science practice, complemented by the new methods, tools and data required to measure them.
- Better knowledge on how impacts develop and how a diversity of benefits can be achieved at scientific, societal and economic levels.
- Better understanding on how the practice of open science can contribute to the increased reproducibility of research results.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Prioritisation of policy actions for open science, and improved policy making on open science.
- Maximised impact of open science.
- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science.

Scope: Open science consists of sharing knowledge and data as early as possible in the research process, in open collaboration with all relevant actors, including citizens. The mainstreaming of open science practice⁴³ is driven by expected impacts: (i) on the research

⁴³ Open science practice includes: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.
