

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from this work programme part subject to the same additional dissemination obligations. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement. Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prize. The maximum amount to be granted to each third party is EUR 60 000. The respective options of the Model Grant Agreement will be applied. Beneficiaries should refer to General Annex B of the Work Programme for further information and guidance.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Significant number of experimental citizen science initiatives kick-started;
- Significant number of citizen science initiatives supported to become sustainable;
- Significant number of newcomers to the Framework Programme and a significant number of citizens involved in co-producing scientific knowledge;
- Increased recognition of excellent citizen science initiatives throughout the European Research Area;
- Improved evidence base for making policy on citizen science.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Increased engagement of citizens with science and researchers with citizens;
- Increased public trust in science;
- Increased alignment of strategic research with society needs, expectations and values;
- Better understanding among citizens of the process of building scientific knowledge through experimentation;
- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science;
- A more open and inclusive research and innovation system.

Scope: Citizen Science is a rapidly emerging mode of research and innovation that shows huge promise in terms of collecting new qualities and quantities of data, harnessing collective intelligence, improving science-society literacy, and improving the relationship between science and society. However, financial support is not well adapted to the needs of small-scale and experimental activities and many citizen science initiatives that have proven their worth fail to sustain over the longer term. In addition, citizen science is under-recognised for its role in bridging between science and society, under-utilised where it is needed such as in relation to the Green Deal and the Sustainable Development Goals, and practitioners of citizen science are insufficiently recognised within the EU research and innovation system as conducting high-quality activities that can have numerous side-benefits.

In order to help remedy these weaknesses in the European research and innovation system, this action will launch two calls for proposals through financial support to third parties:

- *Kick-starting*: This will kick-start and provide support services to *at least* 100 citizen science activities that are at the conceptual or pilot stage and which show promise in terms of innovative theme or approach, collecting and analysing data, or generating other important benefits.
- *Sustaining*: This will support *at least* 25 on-going or recent citizen science activities to find ways to sustain their activities; these will have shown their worth in terms of innovative theme or approach, collecting and analysing data, generating other important benefits, or have particular potential to scale up across member states or the ERA.

The two calls may be launched over one or more waves but it should not be necessary to be supported by the ‘kick-starting’ call to apply for ‘sustainable’ call. Efforts should be made to evaluate the response to the open calls, capture the benefits arising from the citizen science activities it kick-starts (social, economic, democratic, scientific, etc.), and develop intelligence about factors that support or hinder the sustainability of successful citizen science initiatives.

In addition, this action should launch a European Union Prize for Citizen Science (funded by the action through financial support to third parties) open to all citizen science initiatives
