- Lessons learnt to enhance the use of R&I results to enable fast response in the face of future crises and strengthen economic and social resilience, for example through

supporting policy reforms, new regulation, social innovation, behavioural change, new technology adoption and the integration of the gender dimension.

Scope: R&I results and new scientific knowledge can inform policy making and help address societal challenges through new technological and societal solutions, as well as through providing policy recommendations and policy options with a proper (scientific) understanding of the underlying conditions. Testing policy recommendations and findings of scientific research through experiments and novel methodologies increases understanding of the implications, risks and opportunities of possible new solutions, enabling societies to respond faster and more effectively to crises and build resilience and social cohesion.

This action aims at increasing the visibility and fostering the use of R&I results with high policy relevance to contribute to the recovery and resilience of Europe, while engaging research communities and citizens in an “experimentation space” for new, science based, socially inclusive and gender responsive policy initiatives and solutions.

The action will match policy relevant findings for EU resilience stemming from research (such as from EU H2020, HE and previous programmes as well as other EU programmes, and national level publicly funded research) with national, regional and local needs, and carry out the experimentation phase in co-creation with the research communities and citizens. At the core of the action is the design of appropriate trial mechanisms that will test research findings which can be translated to policy and new societal solutions, and thereby provide policy makers and citizens with a high degree of confidence and trust in responding to new challenges.

The project consortium may consider links with related knowledge management activities by the European Commission, including the European Commission’s Knowledge Centres and the Knowledge for Policy Platform hosted by the Joint Research Centre.

DEEPENING THE EUROPEAN RESEARCH AREA

OPEN SCIENCE

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-40: Stepping-up institutional and territorial changes towards open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000. The respective options of the Model Grant Agreement will be applied. Beneficiaries should refer to General Annex B of the Work Programme for further information and guidance. Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from this work programme part subject to the same additional dissemination obligations. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on sustainable institutional and territorial changes towards open and responsible research and innovation;
- A central point of expertise providing services and support for research and innovation institutions, and territories, to open up to society;
- A significant number of institutions and territories in the European Research Area (ERA) become more porous to society, align with the needs, values and expectations of society, improve the excellence of their research and innovation, promote gender equality, and reduce instances of ethical misconduct;
- Reduction in disparities between institutions and territories in terms of their attention to open and responsible research and innovation.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Open and responsible research and innovation practices mainstreamed throughout territorial and institutional settings;

- Increased impact of EU R&I outputs and the conversion of knowledge and ideas into products and services.

Scope: Research and innovation institutions play a key role in creating an enabling environment for opening research and innovation towards society, sharing research outputs, improving research integrity and gender equality, and promoting science education, societal engagement (such as citizen science and other forms of co-design and co-creation) and two-way science communication. At territorial level, interactions between different institutions from across the quadruple helix ⁷⁹, and including societal actors such as civil society organisations and non-governmental organisations, are essential to ensuring that the processes and outcomes of research and innovation are aligned with the needs, values and expectations of society.

However, European research and innovation actors lack a consolidated evidence base and guidance based on EU investments in this area to date to support them, there are significant differences in attention to different aspects of responsibility and openness between institutions and territories, rewards and incentives at the workforce and institutional level are often misaligned or even disfavour openness to society, and there is no central point of reference or provider of services and expertise to turn to.

This action consists of three parts, all of which must be addressed:

The first involves consolidating the evidence base and develop innovative guidance and other materials, which can support institutions and territories to implement sustainable institutional changes and open up to society⁸⁰. It should take into account and build on the learning and knowledge developed by Horizon 2020's Science with and for Society programme ⁸¹ and potentially other sources of knowledge.

The second part involves financial support to third parties, by launching 'cascading grant' call(s) to support institutions and territories from across the ERA to implement sustainable institutional changes towards open and responsible research and innovation. This may require consultancy or other kinds of support services to be developed and rolled out to successful institutions. A significant number of institutional changes (e.g. 70-100 individual institutional changes) should be expected in beneficiary organisations and territories. As such, a significant proportion of the funding should be allocated to the 'cascading grant' mechanism. One or more call(s) for proposals should be launched, which could focus on specific disciplines,

⁷⁹ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁰ Institutional changes are characterised as: 1) a change to how the institution governs/structures itself, 2) expected to have meaningful impact within the institution concerned, 3) intended to last beyond the lifetime of funding (i.e. not one-off activities). See <https://op.europa.eu/s/olV2>.

⁸¹ Particularly relevant projects to build upon were supported by: ISSI-5-2014, GARRI-1-2014, ISSI-5-2015, SwafS-04-2016, SwafS-05-2017, SwafS-05-2018-2019, SwafS-14-2018-2019-2020, SwafS-23-2020. Moreover, this action should build on the evidence base for benefits developed by the MoRRI and Super_MoRRI projects. Projects focused on implementing Gender Equality Plans under SwafS (including those supported by topics GERI-4-2014, SwafS-03-2016-2017, SwafS-09-2018-2019-2020) may also be of relevance. The RRI-Tools project, from FP7's Science in Society programme, may also be relevant: <https://rri-tools.eu/>.

MoRRI country clusters⁸², or other pertinent criteria, but with the underlying goal of reducing disparities between institutions and territories in terms of their attention to different dimensions of openness and responsibility.

The third part involves acting as a central point of expertise and support services on open and responsible research and innovation for institutions and projects under Horizon Europe and within the European Research Area. This point of expertise should have appropriate high-level visibility, and the ability to interact and support all parts of the research and innovation system (all parts of quadruple helix, disciplines, sectors). In order to achieve the expected outcomes, international networking is advised to support co-operation on the issue at global level and provide expertise in support of institutions and projects.

The action should evaluate its impacts and develop recommendations useful to policy makers and those responsible for the governance of research and innovation institutions. The action should raise awareness of the benefits of open and responsible research and innovation to organisations across the ERA. It should develop close co-operation with other relevant projects, with a view to fostering collaboration and the early sharing of knowledge and evidence.

HORIZON-WIDERA-2022-ERA-01-41: Increasing the reproducibility of scientific results

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from the same call topic. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁸²

<https://op.europa.eu/s/olV4>

- Structured understanding of the underlying drivers, of concrete and effective interventions - funding, community-based, technical and policy - to increase reproducibility of the results of R&I; and of their benefits;
- Effective solutions, policy-, technical- and practice-based, to increase the reproducibility of R&I results in funding programmes, in communities and in the dissemination of scientific results;
- Greater collaboration, alignment of practices and joint action by stakeholders to increase reproducibility, including but not limited to training, specialised careers and guidelines for best practice.

These outcomes should contribute to medium and long-term impacts:

- Increased proportion of reproducible results from publicly funded R&I;
- Increased re-use of scientific results by research and innovation;
- Greater quality of the scientific production.

Scope: Reproducibility refers to the possibility for the scientific community to obtain the same results as the originators of a specific finding. As such, reproducibility is core to scientific progress, and there is debate on whether there is a ‘crisis of reproducibility’ in contemporary science. At a time when funding levels for R&I are under scrutiny globally, and societal trust in the outcomes of research and innovation become increasingly essential, there is a need to address inefficiencies in the research process, to avoid useless and costly repetition, to maximise return on investment in R&D&I, to prevent the propagation of mistakes, and to facilitate the translation of results into innovations.

Therefore, this topic aims to fund activities to

- a) determine how increased reproducibility generates gains and savings in the R&I process and improve overall performance - alongside the demonstrated positive effects on their quality, integrity and trust-worthiness, and
- b) find, experiment and mainstream concrete solutions and best-practices to increase the reproducibility of research funded with European taxpayers’ money, including through the more systematic integration of sex and gender as variables whenever relevant.

Consequently, actions should help understand and promote reproducibility by:

- 1) creating an open knowledge base of results, methodologies and interventions on the drivers and consequences of reproducibility for the R&I system; and to fill the main gaps in such knowledge;
- 2) develop, validate, pilot and deploy practices and practical tools for funders, publishers and scientists;

3) promote uptake, greater collaboration, and increased alignment of the activities of stakeholders - scientific and technical communities, publishers and funders among others - to increase reproducibility.

Finally, projects should assist further policy development on reproducibility, based on scoping work by the Commission⁸³. While solutions should be applicable to Europe, attention should be paid to reproducibility in global science.

It is expected that the funded action(s) will adhere to best practices in open science and reproducibility (e.g. re-use existing results, fully document the research process), and provide a final reflection based on their own experience at the forefront of reproducibility.

HORIZON-WIDERA-2022-ERA-01-42: Supporting the development of aligned policies for open access books and monographs

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Improve the understanding of the current landscape of scientific book and monograph publishing in different fields of science in which it plays an important role, and in particular the bottlenecks in strategies and policies for their open access.
- Support aligned funder and institutional policies for open access monographs and books within the open science culture in the European Research Area and facilitate their coordination.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Address and increase equity, diversity and inclusivity in open science practices⁸⁴ inside the European Research Area.

⁸³ i.e. <https://data.europa.eu/doi/10.2777/341654>

- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science.

Scope: Monographs, books and other types of long-text formats are very important outputs in some disciplines, such as in the Social Sciences and the Humanities. Whilst many disciplines rely nearly exclusively on the production of articles, professional advancement requirements, as well as the nature of the research and the writing process in some disciplines, result in the unwavering significance of long-text formats and monographs, both in the digital and in the print formats.

Open access for monographs and other long-text formats has been a slow process in multiple aspects. This is likely because of the higher costs and business models of book publishing, as well as a hesitancy on the side of researcher to trust important parts of their work in terms of volume to the new open access publishing environment. Additionally, funder policies and strategies focus a lot less on monographs than on journal articles, and they are often recommendations and not requirements.

This action aims to support the development of aligned institutional and funder policies and strategies regarding open access to books and monographs in Europe. In this context, the action should support: 1. activities that foster greater understanding of bottlenecks in the development of policies and strategies for open access to books and monographs by institutions and funders; 2. the coordination of policies amongst funders and research institutions, and the sharing of good practices in policies and strategies for open access to books and monographs; 3. actionable and evidence-based recommendations and resources for comprehensive institutional and funder policies for open access to books and monographs. The action may also envisage international cooperation with entities outside the EU Member States and associated countries.

The action should be no longer than 24 months.

HORIZON-WIDERA-2022-ERA-01-44: Developing and piloting training on the practice of open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

⁸⁴ Open science practices may include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to disseminate policy recommendations aimed at relevant research institutions and levels of governance. Beneficiaries must acknowledge and incorporate this obligation in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on open and responsible research and innovation⁸⁵ training for researchers at all stages of their careers across the European Research Area.
- Development and piloting of high-quality training to a significant number of researchers on diverse aspects of open and responsible research and innovation.
- Establishment of a platform for further development of training, mutual learning, and dissemination of recommendations to authorities and institutions responsible for researcher training.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Improved skills leading to greater employability and career prospects for researchers.
- Improvements in the excellence of the science conducted, improved capacity within the European Research Area to tackle societal challenges, greater interaction between science and society, improved overall effectiveness of EU research and innovation funding.
- Improved engagement and cooperation of researchers, with communicators, journalists, industry, policy maker and civil society.

Scope: In order to ensure the excellence of EU research and innovation, the research workforce needs to strengthen skills related to integrity, avoidance of various forms of bias, including gender bias, non-discrimination and inclusion, FAIR data management, data robustness and reproducibility, dissemination and exploitation of results, and interdisciplinary research. It requires skills to communicate science and research results, in the media (including social media) and to policy makers, and skills to participate in public debates. It also requires skills to engage the public to develop research and innovation agenda, the ability

⁸⁵ Responsible research and innovation involves multi-actor and public engagement in research and innovation, easier access to scientific results, the take up of gender and ethics in the research and innovation content and process, and formal and informal science education.

to work in multi-actor collaborations covering all parts of the quadruple helix⁸⁶ where interests and motivation for engaging in research may be diverse, and actively involve citizens in research activities such as citizen science to expand the scope and the potentials of science itself. These skills are needed at all stages of researchers' careers, from undergraduate onwards (including as part of doctoral training).

This action consists of three parts, all of which must be addressed:

The first part consists of consolidating existing evidence⁸⁷ on researcher training on open and responsible research and innovation, at all stages of their careers, from undergraduate onwards (including as part of doctoral training), and identifying gaps in existing practices in the European Research Area. This will include mutual learning activities within and outside the European Research Area to ensure established and emergent good practices are considered. Existing initiatives, such as the European Charter and Code⁸⁸ and the EU Principles for Innovative Doctoral Training⁸⁹, should be taken into account.

The second part consists of developing training modules, courses or other kinds of interventions on open and responsible research and innovation that will be piloted to a significant number of students and researchers in different kinds of research organisations and higher education organisations across Europe, and at all stages of their studies and careers. The learning outcomes will be evaluated, with a view to refining the training ready for more widespread deployment (e.g. at national, institutional levels, or in MSCA actions). Attention should be paid to the gender dimension of the training/learning outcomes, and to ensure that the training is adapted and piloted to researchers of all backgrounds (age, ethnicity, geography, gender, etc.).

The third part consists of establishing a platform, sustainable beyond the lifetime of project funding, to continue knowledge exchange, develop guidance, and further develop training on open and responsible research and innovation. Part of the work must include the wide dissemination of policy recommendations aimed at relevant research institutions and levels of governance.

Working closely with relevant on-going actions, quadruple helix stakeholders, and science outreach stakeholders, is advised. The action is also expected to build on and valorise results from projects already funded under the "Science with and for Society" part of Horizon 2020.

HIGHER EDUCATION INSTITUTIONS AND RESEARCHERS

Proposals are invited against the following topic(s):

⁸⁶ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁷ In addition to relevant national-level initiatives, or even initiatives outside the EU, this includes Horizon 2020 projects supported through topics SEAC-2-2014 and topic SwafS-08-2019-2020 under Science with and for Society; the Horizon 2020 Innovative Training Networks supported through the MSCA-ITN topics as well as the COFUND projects for doctoral programmes under the Marie Skłodowska-Curie Actions, and the Erasmus+ European University Alliances and Horizon 2020 top-up pilot.

⁸⁸ <https://euraxess.ec.europa.eu/jobs/charter>

⁸⁹ <https://www.euraxess.be/belgium/jobs-funding/doctoral-training-principles>

HORIZON-WIDERA-2022-ERA-01-50: Developing an effective ERA talent pipeline

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰

<https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2/Q3 2022

Indicative budget: EUR 1.00 million from the 2022 budget

Budget¹¹¹

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	<i>from 01.020402</i>	<i>19.20</i>	<i>19.40</i>
Estimated total budget		456.20	478.35

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 1.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes:

- Test the new ERA Hubs⁷⁸ concept across different geographies and structures in Europe, based on common compliance criteria; the process should act as an incentive for advanced ecosystems to seek recognition, and for less advanced ecosystems to reach the criteria facilitating support from European, national and regional level.
- Better coordinate relationships between the European Research Area and relevant national or regional stakeholders in order to ensure the smart directionality introduced in the new ERA.
- Develop a common platform for collaboration and best practice sharing across borders, sectors and disciplines on knowledge production, circulation and use, and facilitate cross-fertilisation and smart directionality among ecosystem actors to achieve transformative changes and advance Europe together.
- Increase both the interoperability of the European ecosystems and the intra-operability within each territorial ecosystem, aiming to improve coordination, and foster excellence.
- Facilitate a better circulation and absorption of talents in countries/regions, as well as improve knowledge circulation and uptake of research results;
- Provide a toolbox of best practices for researchers, innovators, industry and institutions across Europe to cooperate.

⁷⁸

See COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Scope: A vibrant ecosystem is an essential condition for growth. In order to take full advantage of possible synergies and complementarities between the EU and national and regional ecosystems for knowledge production, circulation and use, there is a need to make compatible and interoperable the policy frameworks that govern existing structures for knowledge transfer and sharing, and address common criteria for assessing work, processes and outputs. Reinforcing the networking interconnecting geographically or thematically, the ecosystem actors on the basis of smart specialisation and other strategic considerations, such as value chains, will consequently stimulate excellence and complete the coverage across Europe.

This action should build on the preparatory work of the previous Work Programme on Knowledge Ecosystems, which provides among others a mapping of existing ecosystem actors engaged in knowledge production, circulation and use across Europe, as well as designing the ERA Hubs concept as a toolbox of pre-defined common standards of work, processes and outputs, and key performance indicators on operational, programme and strategic impacts. The concept should be tested on collaborations, platforms, or other structures bringing together ecosystem actors, and increase networking between those structures in a coordinated approach, around a common agenda and compliance criteria. The rollout of the concept across Europe is expected to support and coordinate the efforts at local and regional level for the implementation of a pan-European ERA Hubs initiative.

The scope of this action is to pilot the ERA Hub concept with a limited number of ecosystems through implementation in countries and regions where knowledge ecosystem structures aligned to the ERA Hubs concept already exist, combined with countries or regions where an integrated place-based approach is missing. The main goal of the action is to fine-tune through experimentation the designed concept of ERA Hubs and its technical specifications and compliance criteria, share practices, as well as provide a toolkit of best practices and activities that ensure a strong basis for a potential scale-up in different geographies across the EU territory in the next phase.

Projects will be assigned to entities or networks of structures involved in knowledge production, circulation and use activities at European, national, regional or city level, which should take the coordination role in orchestrating the actors of an ecosystem working together to implement the ERA Hubs concept, in pursuit of intra-operability with the territorial ecosystem and a common agenda supporting the economic transitions and smart specialisation strategies, as well as job creation and skills development to better absorb talent in a country or region. These structures could be entities that have the competences and/or the willingness to become pioneers, benchmarks and ambassadors of the new concept and should include higher education institutions or their tech transfer offices, research institutes, business schools, private companies, not for profit organisations, or entities already part of pan-European networks or coming from different funding communities, in order to better connect those communities.

Support from institutional, regional, or national sources is highly encouraged (proven through e.g. letters of commitment), in order to make considerable progress in the deployment of the ERA Hubs initiative in the respective country or region.

The action should include the development of an independent monitoring mechanism to assess the progress of the ecosystem actors engaged in a common agenda and implementation of the ERA Hubs concept in a dedicated country or region. On the basis of the assessment, projects should also provide recommendations on how to deploy the ERA Hubs in different geographies and regions.

HORIZON-WIDERA-2022-ERA-01-31: Innnowwide Bridging Facility

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 0.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 0.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Contributing to implementing the political priorities of the new European Commission, in particular in relation to the objective of ‘A stronger Europe in the world’, and in relation to the EU communication on the comprehensive Strategy with Africa, aiming to support building knowledge economies
- Economic growth and job creation in the EU and in Africa, contributing to the AU Agenda 2030 and relevant EU policies, and enhancing the visibility of EU R&I at the international scene
- Transfer and internationalisation of demonstrated technologies and know-how, both to and from the EU and Africa

Scope: Competition has become global and so is innovation. To compete effectively in new and emerging markets, European and African SMEs need to develop partnerships with their strategic counterparts to generate joint business opportunities in new product-market combinations. Developing a new product-market combination with a strategic partner can be very challenging for SMEs on both continents in terms of technological & financial risks, and market barriers. Before starting, it is essential to assess first the technical feasibility as well as developing a deep understanding of the business environment, including the financial, legal, market and cultural aspects in the targeted markets. This instrument will allow European and African SMEs to develop a partnership beyond conventional market studies, sales channels and export aids. This Horizon Europe funded ‘INNOWIDE Bridging Facility’ precisely covers these risks, by supporting innovative European and African SMEs in conducting Viability Assessment Projects (VAPs) in Europe and Africa, creating the favourable conditions needed to increase the uptake of European and African innovative solutions in each other’s markets. An SME friendly bottom-up approach applies, with no specific technical areas to be addressed.

The VAPs will be selected following a series of open calls organised by the action. The proposal for undertaking the action should define the organisational process for selecting the VAPs for which financial support will be granted, including the process of selecting, allocating and reporting on the use of independent experts and ensuring no conflicts of interest.

At least 75% of the EU funding shall be allocated to financial support for the third parties carrying out the selected VAPs.

The calls should specify that each VAP should include a wide variety of activities to explore the practical, technological and commercial viability of an innovative solution in particular in terms of how it needs to meet local conditions and demands.

Proposals must detail the different types of activities for which a third party may receive financial support such as market studies, partner search and networking, approaches for client/user involvement including societal, behavioural and cultural aspects, and other activities aimed at overcoming barriers for market introduction and uptake.

Proposals must clearly detail the criteria for awarding financial support and simple and comprehensive criteria for calculating the exact amount of such support, which may not exceed EUR 60 000 for each VAP. The award criteria must be objective and non-discriminatory.

Each VAP shall be led by an entity established in an EU Member State or Horizon Europe associated country and shall involve at least one entity established in an African country.

The open calls must be published widely, and Horizon Europe standards with respect to transparency, equal treatment, no conflict of interest and respect of confidentiality must be adhered to. The results of the calls must be published without delay, including, for each VAP,

a description of the project, the legal name and country of the third party, the start date and duration of the project, and the amount of the award.

Proposals should specify how they will promote the calls, how they will monitor and report on call results and how they will assess the quality of the outcomes and experiences from the VAPs, as well as how they will provide regular in-depth analyses and which indicators will be used for measuring the impacts achieved. Analyses should draw up R&I policy conclusions on questions such as which additional joint R&I activities in third countries should be supported, what framework conditions for R&I cooperation need improving, and what further R&I support services should be implemented.

The Commission does not intend to implement the action and will not fund the topic HORIZON-WIDERA-2022-ERA-01-31.

HORIZON-WIDERA-2022-ERA-01-32: An experimentation space for the uptake and use of R&I results for EU resilience and future preparedness

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- A methodology and toolbox to design and implement testing of policy relevant findings stemming from European R&I that can contribute to EU resilience and future preparedness.
- A knowledge base of EU research findings, with high capacity to inform policy and engage citizens and research communities, that are tested, including the methodologies for testing (small scale experiments, randomised control trials etc).
- Lessons learnt to enhance the use of R&I results to enable fast response in the face of future crises and strengthen economic and social resilience, for example through

supporting policy reforms, new regulation, social innovation, behavioural change, new technology adoption and the integration of the gender dimension.

Scope: R&I results and new scientific knowledge can inform policy making and help address societal challenges through new technological and societal solutions, as well as through providing policy recommendations and policy options with a proper (scientific) understanding of the underlying conditions. Testing policy recommendations and findings of scientific research through experiments and novel methodologies increases understanding of the implications, risks and opportunities of possible new solutions, enabling societies to respond faster and more effectively to crises and build resilience and social cohesion.

This action aims at increasing the visibility and fostering the use of R&I results with high policy relevance to contribute to the recovery and resilience of Europe, while engaging research communities and citizens in an “experimentation space” for new, science based, socially inclusive and gender responsive policy initiatives and solutions.

The action will match policy relevant findings for EU resilience stemming from research (such as from EU H2020, HE and previous programmes as well as other EU programmes, and national level publicly funded research) with national, regional and local needs, and carry out the experimentation phase in co-creation with the research communities and citizens. At the core of the action is the design of appropriate trial mechanisms that will test research findings which can be translated to policy and new societal solutions, and thereby provide policy makers and citizens with a high degree of confidence and trust in responding to new challenges.

The project consortium may consider links with related knowledge management activities by the European Commission, including the European Commission’s Knowledge Centres and the Knowledge for Policy Platform hosted by the Joint Research Centre.

DEEPENING THE EUROPEAN RESEARCH AREA

OPEN SCIENCE

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-40: Stepping-up institutional and territorial changes towards open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000. The respective options of the Model Grant Agreement will be applied. Beneficiaries should refer to General Annex B of the Work Programme for further information and guidance. Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from this work programme part subject to the same additional dissemination obligations. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on sustainable institutional and territorial changes towards open and responsible research and innovation;
- A central point of expertise providing services and support for research and innovation institutions, and territories, to open up to society;
- A significant number of institutions and territories in the European Research Area (ERA) become more porous to society, align with the needs, values and expectations of society, improve the excellence of their research and innovation, promote gender equality, and reduce instances of ethical misconduct;
- Reduction in disparities between institutions and territories in terms of their attention to open and responsible research and innovation.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Open and responsible research and innovation practices mainstreamed throughout territorial and institutional settings;

- Increased impact of EU R&I outputs and the conversion of knowledge and ideas into products and services.

Scope: Research and innovation institutions play a key role in creating an enabling environment for opening research and innovation towards society, sharing research outputs, improving research integrity and gender equality, and promoting science education, societal engagement (such as citizen science and other forms of co-design and co-creation) and two-way science communication. At territorial level, interactions between different institutions from across the quadruple helix ⁷⁹, and including societal actors such as civil society organisations and non-governmental organisations, are essential to ensuring that the processes and outcomes of research and innovation are aligned with the needs, values and expectations of society.

However, European research and innovation actors lack a consolidated evidence base and guidance based on EU investments in this area to date to support them, there are significant differences in attention to different aspects of responsibility and openness between institutions and territories, rewards and incentives at the workforce and institutional level are often misaligned or even disfavour openness to society, and there is no central point of reference or provider of services and expertise to turn to.

This action consists of three parts, all of which must be addressed:

The first involves consolidating the evidence base and develop innovative guidance and other materials, which can support institutions and territories to implement sustainable institutional changes and open up to society⁸⁰. It should take into account and build on the learning and knowledge developed by Horizon 2020's Science with and for Society programme ⁸¹ and potentially other sources of knowledge.

The second part involves financial support to third parties, by launching 'cascading grant' call(s) to support institutions and territories from across the ERA to implement sustainable institutional changes towards open and responsible research and innovation. This may require consultancy or other kinds of support services to be developed and rolled out to successful institutions. A significant number of institutional changes (e.g. 70-100 individual institutional changes) should be expected in beneficiary organisations and territories. As such, a significant proportion of the funding should be allocated to the 'cascading grant' mechanism. One or more call(s) for proposals should be launched, which could focus on specific disciplines,

⁷⁹ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁰ Institutional changes are characterised as: 1) a change to how the institution governs/structures itself, 2) expected to have meaningful impact within the institution concerned, 3) intended to last beyond the lifetime of funding (i.e. not one-off activities). See <https://op.europa.eu/s/olV2>.

⁸¹ Particularly relevant projects to build upon were supported by: ISSI-5-2014, GARRI-1-2014, ISSI-5-2015, SwafS-04-2016, SwafS-05-2017, SwafS-05-2018-2019, SwafS-14-2018-2019-2020, SwafS-23-2020. Moreover, this action should build on the evidence base for benefits developed by the MoRRI and Super_MoRRI projects. Projects focused on implementing Gender Equality Plans under SwafS (including those supported by topics GERI-4-2014, SwafS-03-2016-2017, SwafS-09-2018-2019-2020) may also be of relevance. The RRI-Tools project, from FP7's Science in Society programme, may also be relevant: <https://rri-tools.eu/>.

MoRRI country clusters⁸², or other pertinent criteria, but with the underlying goal of reducing disparities between institutions and territories in terms of their attention to different dimensions of openness and responsibility.

The third part involves acting as a central point of expertise and support services on open and responsible research and innovation for institutions and projects under Horizon Europe and within the European Research Area. This point of expertise should have appropriate high-level visibility, and the ability to interact and support all parts of the research and innovation system (all parts of quadruple helix, disciplines, sectors). In order to achieve the expected outcomes, international networking is advised to support co-operation on the issue at global level and provide expertise in support of institutions and projects.

The action should evaluate its impacts and develop recommendations useful to policy makers and those responsible for the governance of research and innovation institutions. The action should raise awareness of the benefits of open and responsible research and innovation to organisations across the ERA. It should develop close co-operation with other relevant projects, with a view to fostering collaboration and the early sharing of knowledge and evidence.

HORIZON-WIDERA-2022-ERA-01-41: Increasing the reproducibility of scientific results

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from the same call topic. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁸²

<https://op.europa.eu/s/olV4>

- Structured understanding of the underlying drivers, of concrete and effective interventions - funding, community-based, technical and policy - to increase reproducibility of the results of R&I; and of their benefits;
- Effective solutions, policy-, technical- and practice-based, to increase the reproducibility of R&I results in funding programmes, in communities and in the dissemination of scientific results;
- Greater collaboration, alignment of practices and joint action by stakeholders to increase reproducibility, including but not limited to training, specialised careers and guidelines for best practice.

These outcomes should contribute to medium and long-term impacts:

- Increased proportion of reproducible results from publicly funded R&I;
- Increased re-use of scientific results by research and innovation;
- Greater quality of the scientific production.

Scope: Reproducibility refers to the possibility for the scientific community to obtain the same results as the originators of a specific finding. As such, reproducibility is core to scientific progress, and there is debate on whether there is a ‘crisis of reproducibility’ in contemporary science. At a time when funding levels for R&I are under scrutiny globally, and societal trust in the outcomes of research and innovation become increasingly essential, there is a need to address inefficiencies in the research process, to avoid useless and costly repetition, to maximise return on investment in R&D&I, to prevent the propagation of mistakes, and to facilitate the translation of results into innovations.

Therefore, this topic aims to fund activities to

- a) determine how increased reproducibility generates gains and savings in the R&I process and improve overall performance - alongside the demonstrated positive effects on their quality, integrity and trust-worthiness, and
- b) find, experiment and mainstream concrete solutions and best-practices to increase the reproducibility of research funded with European taxpayers’ money, including through the more systematic integration of sex and gender as variables whenever relevant.

Consequently, actions should help understand and promote reproducibility by:

- 1) creating an open knowledge base of results, methodologies and interventions on the drivers and consequences of reproducibility for the R&I system; and to fill the main gaps in such knowledge;
- 2) develop, validate, pilot and deploy practices and practical tools for funders, publishers and scientists;

3) promote uptake, greater collaboration, and increased alignment of the activities of stakeholders - scientific and technical communities, publishers and funders among others - to increase reproducibility.

Finally, projects should assist further policy development on reproducibility, based on scoping work by the Commission⁸³. While solutions should be applicable to Europe, attention should be paid to reproducibility in global science.

It is expected that the funded action(s) will adhere to best practices in open science and reproducibility (e.g. re-use existing results, fully document the research process), and provide a final reflection based on their own experience at the forefront of reproducibility.

HORIZON-WIDERA-2022-ERA-01-42: Supporting the development of aligned policies for open access books and monographs

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Improve the understanding of the current landscape of scientific book and monograph publishing in different fields of science in which it plays an important role, and in particular the bottlenecks in strategies and policies for their open access.
- Support aligned funder and institutional policies for open access monographs and books within the open science culture in the European Research Area and facilitate their coordination.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Address and increase equity, diversity and inclusivity in open science practices⁸⁴ inside the European Research Area.

⁸³ i.e. <https://data.europa.eu/doi/10.2777/341654>

- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science.

Scope: Monographs, books and other types of long-text formats are very important outputs in some disciplines, such as in the Social Sciences and the Humanities. Whilst many disciplines rely nearly exclusively on the production of articles, professional advancement requirements, as well as the nature of the research and the writing process in some disciplines, result in the unwavering significance of long-text formats and monographs, both in the digital and in the print formats.

Open access for monographs and other long-text formats has been a slow process in multiple aspects. This is likely because of the higher costs and business models of book publishing, as well as a hesitancy on the side of researcher to trust important parts of their work in terms of volume to the new open access publishing environment. Additionally, funder policies and strategies focus a lot less on monographs than on journal articles, and they are often recommendations and not requirements.

This action aims to support the development of aligned institutional and funder policies and strategies regarding open access to books and monographs in Europe. In this context, the action should support: 1. activities that foster greater understanding of bottlenecks in the development of policies and strategies for open access to books and monographs by institutions and funders; 2. the coordination of policies amongst funders and research institutions, and the sharing of good practices in policies and strategies for open access to books and monographs; 3. actionable and evidence-based recommendations and resources for comprehensive institutional and funder policies for open access to books and monographs. The action may also envisage international cooperation with entities outside the EU Member States and associated countries.

The action should be no longer than 24 months.

HORIZON-WIDERA-2022-ERA-01-44: Developing and piloting training on the practice of open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

⁸⁴ Open science practices may include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to disseminate policy recommendations aimed at relevant research institutions and levels of governance. Beneficiaries must acknowledge and incorporate this obligation in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on open and responsible research and innovation⁸⁵ training for researchers at all stages of their careers across the European Research Area.
- Development and piloting of high-quality training to a significant number of researchers on diverse aspects of open and responsible research and innovation.
- Establishment of a platform for further development of training, mutual learning, and dissemination of recommendations to authorities and institutions responsible for researcher training.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Improved skills leading to greater employability and career prospects for researchers.
- Improvements in the excellence of the science conducted, improved capacity within the European Research Area to tackle societal challenges, greater interaction between science and society, improved overall effectiveness of EU research and innovation funding.
- Improved engagement and cooperation of researchers, with communicators, journalists, industry, policy maker and civil society.

Scope: In order to ensure the excellence of EU research and innovation, the research workforce needs to strengthen skills related to integrity, avoidance of various forms of bias, including gender bias, non-discrimination and inclusion, FAIR data management, data robustness and reproducibility, dissemination and exploitation of results, and interdisciplinary research. It requires skills to communicate science and research results, in the media (including social media) and to policy makers, and skills to participate in public debates. It also requires skills to engage the public to develop research and innovation agenda, the ability

⁸⁵ Responsible research and innovation involves multi-actor and public engagement in research and innovation, easier access to scientific results, the take up of gender and ethics in the research and innovation content and process, and formal and informal science education.

to work in multi-actor collaborations covering all parts of the quadruple helix⁸⁶ where interests and motivation for engaging in research may be diverse, and actively involve citizens in research activities such as citizen science to expand the scope and the potentials of science itself. These skills are needed at all stages of researchers' careers, from undergraduate onwards (including as part of doctoral training).

This action consists of three parts, all of which must be addressed:

The first part consists of consolidating existing evidence⁸⁷ on researcher training on open and responsible research and innovation, at all stages of their careers, from undergraduate onwards (including as part of doctoral training), and identifying gaps in existing practices in the European Research Area. This will include mutual learning activities within and outside the European Research Area to ensure established and emergent good practices are considered. Existing initiatives, such as the European Charter and Code⁸⁸ and the EU Principles for Innovative Doctoral Training⁸⁹, should be taken into account.

The second part consists of developing training modules, courses or other kinds of interventions on open and responsible research and innovation that will be piloted to a significant number of students and researchers in different kinds of research organisations and higher education organisations across Europe, and at all stages of their studies and careers. The learning outcomes will be evaluated, with a view to refining the training ready for more widespread deployment (e.g. at national, institutional levels, or in MSCA actions). Attention should be paid to the gender dimension of the training/learning outcomes, and to ensure that the training is adapted and piloted to researchers of all backgrounds (age, ethnicity, geography, gender, etc.).

The third part consists of establishing a platform, sustainable beyond the lifetime of project funding, to continue knowledge exchange, develop guidance, and further develop training on open and responsible research and innovation. Part of the work must include the wide dissemination of policy recommendations aimed at relevant research institutions and levels of governance.

Working closely with relevant on-going actions, quadruple helix stakeholders, and science outreach stakeholders, is advised. The action is also expected to build on and valorise results from projects already funded under the "Science with and for Society" part of Horizon 2020.

HIGHER EDUCATION INSTITUTIONS AND RESEARCHERS

Proposals are invited against the following topic(s):

⁸⁶ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁷ In addition to relevant national-level initiatives, or even initiatives outside the EU, this includes Horizon 2020 projects supported through topics SEAC-2-2014 and topic SwafS-08-2019-2020 under Science with and for Society; the Horizon 2020 Innovative Training Networks supported through the MSCA-ITN topics as well as the COFUND projects for doctoral programmes under the Marie Skłodowska-Curie Actions, and the Erasmus+ European University Alliances and Horizon 2020 top-up pilot.

⁸⁸ <https://euraxess.ec.europa.eu/jobs/charter>

⁸⁹ <https://www.euraxess.be/belgium/jobs-funding/doctoral-training-principles>

HORIZON-WIDERA-2022-ERA-01-50: Developing an effective ERA talent pipeline

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰ <https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

HORIZON-WIDERA-2022-ERA-01-40: Stepping-up institutional and territorial changes towards open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000. The respective options of the Model Grant Agreement will be applied. Beneficiaries should refer to General Annex B of the Work Programme for further information and guidance. Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from this work programme part subject to the same additional dissemination obligations. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on sustainable institutional and territorial changes towards open and responsible research and innovation;
- A central point of expertise providing services and support for research and innovation institutions, and territories, to open up to society;
- A significant number of institutions and territories in the European Research Area (ERA) become more porous to society, align with the needs, values and expectations of society, improve the excellence of their research and innovation, promote gender equality, and reduce instances of ethical misconduct;
- Reduction in disparities between institutions and territories in terms of their attention to open and responsible research and innovation.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Open and responsible research and innovation practices mainstreamed throughout territorial and institutional settings;

- Increased impact of EU R&I outputs and the conversion of knowledge and ideas into products and services.

Scope: Research and innovation institutions play a key role in creating an enabling environment for opening research and innovation towards society, sharing research outputs, improving research integrity and gender equality, and promoting science education, societal engagement (such as citizen science and other forms of co-design and co-creation) and two-way science communication. At territorial level, interactions between different institutions from across the quadruple helix ⁷⁹, and including societal actors such as civil society organisations and non-governmental organisations, are essential to ensuring that the processes and outcomes of research and innovation are aligned with the needs, values and expectations of society.

However, European research and innovation actors lack a consolidated evidence base and guidance based on EU investments in this area to date to support them, there are significant differences in attention to different aspects of responsibility and openness between institutions and territories, rewards and incentives at the workforce and institutional level are often misaligned or even disfavour openness to society, and there is no central point of reference or provider of services and expertise to turn to.

This action consists of three parts, all of which must be addressed:

The first involves consolidating the evidence base and develop innovative guidance and other materials, which can support institutions and territories to implement sustainable institutional changes and open up to society⁸⁰. It should take into account and build on the learning and knowledge developed by Horizon 2020's Science with and for Society programme ⁸¹ and potentially other sources of knowledge.

The second part involves financial support to third parties, by launching 'cascading grant' call(s) to support institutions and territories from across the ERA to implement sustainable institutional changes towards open and responsible research and innovation. This may require consultancy or other kinds of support services to be developed and rolled out to successful institutions. A significant number of institutional changes (e.g. 70-100 individual institutional changes) should be expected in beneficiary organisations and territories. As such, a significant proportion of the funding should be allocated to the 'cascading grant' mechanism. One or more call(s) for proposals should be launched, which could focus on specific disciplines,

⁷⁹ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁰ Institutional changes are characterised as: 1) a change to how the institution governs/structures itself, 2) expected to have meaningful impact within the institution concerned, 3) intended to last beyond the lifetime of funding (i.e. not one-off activities). See <https://op.europa.eu/s/olV2>.

⁸¹ Particularly relevant projects to build upon were supported by: ISSI-5-2014, GARRI-1-2014, ISSI-5-2015, SwafS-04-2016, SwafS-05-2017, SwafS-05-2018-2019, SwafS-14-2018-2019-2020, SwafS-23-2020. Moreover, this action should build on the evidence base for benefits developed by the MoRRI and Super_MoRRI projects. Projects focused on implementing Gender Equality Plans under SwafS (including those supported by topics GERI-4-2014, SwafS-03-2016-2017, SwafS-09-2018-2019-2020) may also be of relevance. The RRI-Tools project, from FP7's Science in Society programme, may also be relevant: <https://rri-tools.eu/>.

MoRRI country clusters⁸², or other pertinent criteria, but with the underlying goal of reducing disparities between institutions and territories in terms of their attention to different dimensions of openness and responsibility.

The third part involves acting as a central point of expertise and support services on open and responsible research and innovation for institutions and projects under Horizon Europe and within the European Research Area. This point of expertise should have appropriate high-level visibility, and the ability to interact and support all parts of the research and innovation system (all parts of quadruple helix, disciplines, sectors). In order to achieve the expected outcomes, international networking is advised to support co-operation on the issue at global level and provide expertise in support of institutions and projects.

The action should evaluate its impacts and develop recommendations useful to policy makers and those responsible for the governance of research and innovation institutions. The action should raise awareness of the benefits of open and responsible research and innovation to organisations across the ERA. It should develop close co-operation with other relevant projects, with a view to fostering collaboration and the early sharing of knowledge and evidence.

HORIZON-WIDERA-2022-ERA-01-41: Increasing the reproducibility of scientific results

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from the same call topic. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁸² <https://op.europa.eu/s/olV4>

- Structured understanding of the underlying drivers, of concrete and effective interventions - funding, community-based, technical and policy - to increase reproducibility of the results of R&I; and of their benefits;
- Effective solutions, policy-, technical- and practice-based, to increase the reproducibility of R&I results in funding programmes, in communities and in the dissemination of scientific results;
- Greater collaboration, alignment of practices and joint action by stakeholders to increase reproducibility, including but not limited to training, specialised careers and guidelines for best practice.

These outcomes should contribute to medium and long-term impacts:

- Increased proportion of reproducible results from publicly funded R&I;
- Increased re-use of scientific results by research and innovation;
- Greater quality of the scientific production.

Scope: Reproducibility refers to the possibility for the scientific community to obtain the same results as the originators of a specific finding. As such, reproducibility is core to scientific progress, and there is debate on whether there is a ‘crisis of reproducibility’ in contemporary science. At a time when funding levels for R&I are under scrutiny globally, and societal trust in the outcomes of research and innovation become increasingly essential, there is a need to address inefficiencies in the research process, to avoid useless and costly repetition, to maximise return on investment in R&D&I, to prevent the propagation of mistakes, and to facilitate the translation of results into innovations.

Therefore, this topic aims to fund activities to

- a) determine how increased reproducibility generates gains and savings in the R&I process and improve overall performance - alongside the demonstrated positive effects on their quality, integrity and trust-worthiness, and
- b) find, experiment and mainstream concrete solutions and best-practices to increase the reproducibility of research funded with European taxpayers’ money, including through the more systematic integration of sex and gender as variables whenever relevant.

Consequently, actions should help understand and promote reproducibility by:

- 1) creating an open knowledge base of results, methodologies and interventions on the drivers and consequences of reproducibility for the R&I system; and to fill the main gaps in such knowledge;
- 2) develop, validate, pilot and deploy practices and practical tools for funders, publishers and scientists;

3) promote uptake, greater collaboration, and increased alignment of the activities of stakeholders - scientific and technical communities, publishers and funders among others - to increase reproducibility.

Finally, projects should assist further policy development on reproducibility, based on scoping work by the Commission⁸³. While solutions should be applicable to Europe, attention should be paid to reproducibility in global science.

It is expected that the funded action(s) will adhere to best practices in open science and reproducibility (e.g. re-use existing results, fully document the research process), and provide a final reflection based on their own experience at the forefront of reproducibility.

HORIZON-WIDERA-2022-ERA-01-42: Supporting the development of aligned policies for open access books and monographs

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Improve the understanding of the current landscape of scientific book and monograph publishing in different fields of science in which it plays an important role, and in particular the bottlenecks in strategies and policies for their open access.
- Support aligned funder and institutional policies for open access monographs and books within the open science culture in the European Research Area and facilitate their coordination.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Address and increase equity, diversity and inclusivity in open science practices⁸⁴ inside the European Research Area.

⁸³ i.e. <https://data.europa.eu/doi/10.2777/341654>

- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science.

Scope: Monographs, books and other types of long-text formats are very important outputs in some disciplines, such as in the Social Sciences and the Humanities. Whilst many disciplines rely nearly exclusively on the production of articles, professional advancement requirements, as well as the nature of the research and the writing process in some disciplines, result in the unwavering significance of long-text formats and monographs, both in the digital and in the print formats.

Open access for monographs and other long-text formats has been a slow process in multiple aspects. This is likely because of the higher costs and business models of book publishing, as well as a hesitancy on the side of researcher to trust important parts of their work in terms of volume to the new open access publishing environment. Additionally, funder policies and strategies focus a lot less on monographs than on journal articles, and they are often recommendations and not requirements.

This action aims to support the development of aligned institutional and funder policies and strategies regarding open access to books and monographs in Europe. In this context, the action should support: 1. activities that foster greater understanding of bottlenecks in the development of policies and strategies for open access to books and monographs by institutions and funders; 2. the coordination of policies amongst funders and research institutions, and the sharing of good practices in policies and strategies for open access to books and monographs; 3. actionable and evidence-based recommendations and resources for comprehensive institutional and funder policies for open access to books and monographs. The action may also envisage international cooperation with entities outside the EU Member States and associated countries.

The action should be no longer than 24 months.

HORIZON-WIDERA-2022-ERA-01-44: Developing and piloting training on the practice of open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

⁸⁴ Open science practices may include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to disseminate policy recommendations aimed at relevant research institutions and levels of governance. Beneficiaries must acknowledge and incorporate this obligation in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on open and responsible research and innovation⁸⁵ training for researchers at all stages of their careers across the European Research Area.
- Development and piloting of high-quality training to a significant number of researchers on diverse aspects of open and responsible research and innovation.
- Establishment of a platform for further development of training, mutual learning, and dissemination of recommendations to authorities and institutions responsible for researcher training.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Improved skills leading to greater employability and career prospects for researchers.
- Improvements in the excellence of the science conducted, improved capacity within the European Research Area to tackle societal challenges, greater interaction between science and society, improved overall effectiveness of EU research and innovation funding.
- Improved engagement and cooperation of researchers, with communicators, journalists, industry, policy maker and civil society.

Scope: In order to ensure the excellence of EU research and innovation, the research workforce needs to strengthen skills related to integrity, avoidance of various forms of bias, including gender bias, non-discrimination and inclusion, FAIR data management, data robustness and reproducibility, dissemination and exploitation of results, and interdisciplinary research. It requires skills to communicate science and research results, in the media (including social media) and to policy makers, and skills to participate in public debates. It also requires skills to engage the public to develop research and innovation agenda, the ability

⁸⁵ Responsible research and innovation involves multi-actor and public engagement in research and innovation, easier access to scientific results, the take up of gender and ethics in the research and innovation content and process, and formal and informal science education.

to work in multi-actor collaborations covering all parts of the quadruple helix⁸⁶ where interests and motivation for engaging in research may be diverse, and actively involve citizens in research activities such as citizen science to expand the scope and the potentials of science itself. These skills are needed at all stages of researchers' careers, from undergraduate onwards (including as part of doctoral training).

This action consists of three parts, all of which must be addressed:

The first part consists of consolidating existing evidence⁸⁷ on researcher training on open and responsible research and innovation, at all stages of their careers, from undergraduate onwards (including as part of doctoral training), and identifying gaps in existing practices in the European Research Area. This will include mutual learning activities within and outside the European Research Area to ensure established and emergent good practices are considered. Existing initiatives, such as the European Charter and Code⁸⁸ and the EU Principles for Innovative Doctoral Training⁸⁹, should be taken into account.

The second part consists of developing training modules, courses or other kinds of interventions on open and responsible research and innovation that will be piloted to a significant number of students and researchers in different kinds of research organisations and higher education organisations across Europe, and at all stages of their studies and careers. The learning outcomes will be evaluated, with a view to refining the training ready for more widespread deployment (e.g. at national, institutional levels, or in MSCA actions). Attention should be paid to the gender dimension of the training/learning outcomes, and to ensure that the training is adapted and piloted to researchers of all backgrounds (age, ethnicity, geography, gender, etc.).

The third part consists of establishing a platform, sustainable beyond the lifetime of project funding, to continue knowledge exchange, develop guidance, and further develop training on open and responsible research and innovation. Part of the work must include the wide dissemination of policy recommendations aimed at relevant research institutions and levels of governance.

Working closely with relevant on-going actions, quadruple helix stakeholders, and science outreach stakeholders, is advised. The action is also expected to build on and valorise results from projects already funded under the "Science with and for Society" part of Horizon 2020.

HIGHER EDUCATION INSTITUTIONS AND RESEARCHERS

Proposals are invited against the following topic(s):

⁸⁶ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁷ In addition to relevant national-level initiatives, or even initiatives outside the EU, this includes Horizon 2020 projects supported through topics SEAC-2-2014 and topic SwafS-08-2019-2020 under Science with and for Society; the Horizon 2020 Innovative Training Networks supported through the MSCA-ITN topics as well as the COFUND projects for doctoral programmes under the Marie Skłodowska-Curie Actions, and the Erasmus+ European University Alliances and Horizon 2020 top-up pilot.

⁸⁸ <https://euraxess.ec.europa.eu/jobs/charter>

⁸⁹ <https://www.euraxess.be/belgium/jobs-funding/doctoral-training-principles>

HORIZON-WIDERA-2022-ERA-01-50: Developing an effective ERA talent pipeline

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰

<https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2/Q3 2022

Indicative budget: EUR 1.00 million from the 2022 budget

HORIZON-WIDERA-2022-ERA-01-42: Supporting the development of aligned policies for open access books and monographs

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Improve the understanding of the current landscape of scientific book and monograph publishing in different fields of science in which it plays an important role, and in particular the bottlenecks in strategies and policies for their open access.
- Support aligned funder and institutional policies for open access monographs and books within the open science culture in the European Research Area and facilitate their coordination.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Address and increase equity, diversity and inclusivity in open science practices⁸⁴ inside the European Research Area.

⁸³ i.e. <https://data.europa.eu/doi/10.2777/341654>

- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science.

Scope: Monographs, books and other types of long-text formats are very important outputs in some disciplines, such as in the Social Sciences and the Humanities. Whilst many disciplines rely nearly exclusively on the production of articles, professional advancement requirements, as well as the nature of the research and the writing process in some disciplines, result in the unwavering significance of long-text formats and monographs, both in the digital and in the print formats.

Open access for monographs and other long-text formats has been a slow process in multiple aspects. This is likely because of the higher costs and business models of book publishing, as well as a hesitancy on the side of researcher to trust important parts of their work in terms of volume to the new open access publishing environment. Additionally, funder policies and strategies focus a lot less on monographs than on journal articles, and they are often recommendations and not requirements.

This action aims to support the development of aligned institutional and funder policies and strategies regarding open access to books and monographs in Europe. In this context, the action should support: 1. activities that foster greater understanding of bottlenecks in the development of policies and strategies for open access to books and monographs by institutions and funders; 2. the coordination of policies amongst funders and research institutions, and the sharing of good practices in policies and strategies for open access to books and monographs; 3. actionable and evidence-based recommendations and resources for comprehensive institutional and funder policies for open access to books and monographs. The action may also envisage international cooperation with entities outside the EU Member States and associated countries.

The action should be no longer than 24 months.

HORIZON-WIDERA-2022-ERA-01-44: Developing and piloting training on the practice of open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

⁸⁴ Open science practices may include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to disseminate policy recommendations aimed at relevant research institutions and levels of governance. Beneficiaries must acknowledge and incorporate this obligation in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on open and responsible research and innovation⁸⁵ training for researchers at all stages of their careers across the European Research Area.
- Development and piloting of high-quality training to a significant number of researchers on diverse aspects of open and responsible research and innovation.
- Establishment of a platform for further development of training, mutual learning, and dissemination of recommendations to authorities and institutions responsible for researcher training.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Improved skills leading to greater employability and career prospects for researchers.
- Improvements in the excellence of the science conducted, improved capacity within the European Research Area to tackle societal challenges, greater interaction between science and society, improved overall effectiveness of EU research and innovation funding.
- Improved engagement and cooperation of researchers, with communicators, journalists, industry, policy maker and civil society.

Scope: In order to ensure the excellence of EU research and innovation, the research workforce needs to strengthen skills related to integrity, avoidance of various forms of bias, including gender bias, non-discrimination and inclusion, FAIR data management, data robustness and reproducibility, dissemination and exploitation of results, and interdisciplinary research. It requires skills to communicate science and research results, in the media (including social media) and to policy makers, and skills to participate in public debates. It also requires skills to engage the public to develop research and innovation agenda, the ability

⁸⁵ Responsible research and innovation involves multi-actor and public engagement in research and innovation, easier access to scientific results, the take up of gender and ethics in the research and innovation content and process, and formal and informal science education.

to work in multi-actor collaborations covering all parts of the quadruple helix⁸⁶ where interests and motivation for engaging in research may be diverse, and actively involve citizens in research activities such as citizen science to expand the scope and the potentials of science itself. These skills are needed at all stages of researchers' careers, from undergraduate onwards (including as part of doctoral training).

This action consists of three parts, all of which must be addressed:

The first part consists of consolidating existing evidence⁸⁷ on researcher training on open and responsible research and innovation, at all stages of their careers, from undergraduate onwards (including as part of doctoral training), and identifying gaps in existing practices in the European Research Area. This will include mutual learning activities within and outside the European Research Area to ensure established and emergent good practices are considered. Existing initiatives, such as the European Charter and Code⁸⁸ and the EU Principles for Innovative Doctoral Training⁸⁹, should be taken into account.

The second part consists of developing training modules, courses or other kinds of interventions on open and responsible research and innovation that will be piloted to a significant number of students and researchers in different kinds of research organisations and higher education organisations across Europe, and at all stages of their studies and careers. The learning outcomes will be evaluated, with a view to refining the training ready for more widespread deployment (e.g. at national, institutional levels, or in MSCA actions). Attention should be paid to the gender dimension of the training/learning outcomes, and to ensure that the training is adapted and piloted to researchers of all backgrounds (age, ethnicity, geography, gender, etc.).

The third part consists of establishing a platform, sustainable beyond the lifetime of project funding, to continue knowledge exchange, develop guidance, and further develop training on open and responsible research and innovation. Part of the work must include the wide dissemination of policy recommendations aimed at relevant research institutions and levels of governance.

Working closely with relevant on-going actions, quadruple helix stakeholders, and science outreach stakeholders, is advised. The action is also expected to build on and valorise results from projects already funded under the "Science with and for Society" part of Horizon 2020.

HIGHER EDUCATION INSTITUTIONS AND RESEARCHERS

Proposals are invited against the following topic(s):

⁸⁶ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁷ In addition to relevant national-level initiatives, or even initiatives outside the EU, this includes Horizon 2020 projects supported through topics SEAC-2-2014 and topic SwafS-08-2019-2020 under Science with and for Society; the Horizon 2020 Innovative Training Networks supported through the MSCA-ITN topics as well as the COFUND projects for doctoral programmes under the Marie Skłodowska-Curie Actions, and the Erasmus+ European University Alliances and Horizon 2020 top-up pilot.

⁸⁸ <https://euraxess.ec.europa.eu/jobs/charter>

⁸⁹ <https://www.euraxess.be/belgium/jobs-funding/doctoral-training-principles>

HORIZON-WIDERA-2022-ERA-01-50: Developing an effective ERA talent pipeline

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰

<https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

	<i>from 01.020402</i>	<i>19.20</i>	<i>19.40</i>
Estimated total budget		456.20	478.35

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 0.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 0.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Contributing to implementing the political priorities of the new European Commission, in particular in relation to the objective of ‘A stronger Europe in the world’, and in relation to the EU communication on the comprehensive Strategy with Africa, aiming to support building knowledge economies
- Economic growth and job creation in the EU and in Africa, contributing to the AU Agenda 2030 and relevant EU policies, and enhancing the visibility of EU R&I at the international scene
- Transfer and internationalisation of demonstrated technologies and know-how, both to and from the EU and Africa

Scope: Competition has become global and so is innovation. To compete effectively in new and emerging markets, European and African SMEs need to develop partnerships with their strategic counterparts to generate joint business opportunities in new product-market combinations. Developing a new product-market combination with a strategic partner can be very challenging for SMEs on both continents in terms of technological & financial risks, and market barriers. Before starting, it is essential to assess first the technical feasibility as well as developing a deep understanding of the business environment, including the financial, legal, market and cultural aspects in the targeted markets. This instrument will allow European and African SMEs to develop a partnership beyond conventional market studies, sales channels and export aids. This Horizon Europe funded ‘INNOWIDE Bridging Facility’ precisely covers these risks, by supporting innovative European and African SMEs in conducting Viability Assessment Projects (VAPs) in Europe and Africa, creating the favourable conditions needed to increase the uptake of European and African innovative solutions in each other’s markets. An SME friendly bottom-up approach applies, with no specific technical areas to be addressed.

The VAPs will be selected following a series of open calls organised by the action. The proposal for undertaking the action should define the organisational process for selecting the VAPs for which financial support will be granted, including the process of selecting, allocating and reporting on the use of independent experts and ensuring no conflicts of interest.

At least 75% of the EU funding shall be allocated to financial support for the third parties carrying out the selected VAPs.

The calls should specify that each VAP should include a wide variety of activities to explore the practical, technological and commercial viability of an innovative solution in particular in terms of how it needs to meet local conditions and demands.

Proposals must detail the different types of activities for which a third party may receive financial support such as market studies, partner search and networking, approaches for client/user involvement including societal, behavioural and cultural aspects, and other activities aimed at overcoming barriers for market introduction and uptake.

Proposals must clearly detail the criteria for awarding financial support and simple and comprehensive criteria for calculating the exact amount of such support, which may not exceed EUR 60 000 for each VAP. The award criteria must be objective and non-discriminatory.

Each VAP shall be led by an entity established in an EU Member State or Horizon Europe associated country and shall involve at least one entity established in an African country.

The open calls must be published widely, and Horizon Europe standards with respect to transparency, equal treatment, no conflict of interest and respect of confidentiality must be adhered to. The results of the calls must be published without delay, including, for each VAP,

a description of the project, the legal name and country of the third party, the start date and duration of the project, and the amount of the award.

Proposals should specify how they will promote the calls, how they will monitor and report on call results and how they will assess the quality of the outcomes and experiences from the VAPs, as well as how they will provide regular in-depth analyses and which indicators will be used for measuring the impacts achieved. Analyses should draw up R&I policy conclusions on questions such as which additional joint R&I activities in third countries should be supported, what framework conditions for R&I cooperation need improving, and what further R&I support services should be implemented.

The Commission does not intend to implement the action and will not fund the topic HORIZON-WIDERA-2022-ERA-01-31.

HORIZON-WIDERA-2022-ERA-01-32: An experimentation space for the uptake and use of R&I results for EU resilience and future preparedness

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- A methodology and toolbox to design and implement testing of policy relevant findings stemming from European R&I that can contribute to EU resilience and future preparedness.
- A knowledge base of EU research findings, with high capacity to inform policy and engage citizens and research communities, that are tested, including the methodologies for testing (small scale experiments, randomised control trials etc).
- Lessons learnt to enhance the use of R&I results to enable fast response in the face of future crises and strengthen economic and social resilience, for example through

supporting policy reforms, new regulation, social innovation, behavioural change, new technology adoption and the integration of the gender dimension.

Scope: R&I results and new scientific knowledge can inform policy making and help address societal challenges through new technological and societal solutions, as well as through providing policy recommendations and policy options with a proper (scientific) understanding of the underlying conditions. Testing policy recommendations and findings of scientific research through experiments and novel methodologies increases understanding of the implications, risks and opportunities of possible new solutions, enabling societies to respond faster and more effectively to crises and build resilience and social cohesion.

This action aims at increasing the visibility and fostering the use of R&I results with high policy relevance to contribute to the recovery and resilience of Europe, while engaging research communities and citizens in an “experimentation space” for new, science based, socially inclusive and gender responsive policy initiatives and solutions.

The action will match policy relevant findings for EU resilience stemming from research (such as from EU H2020, HE and previous programmes as well as other EU programmes, and national level publicly funded research) with national, regional and local needs, and carry out the experimentation phase in co-creation with the research communities and citizens. At the core of the action is the design of appropriate trial mechanisms that will test research findings which can be translated to policy and new societal solutions, and thereby provide policy makers and citizens with a high degree of confidence and trust in responding to new challenges.

The project consortium may consider links with related knowledge management activities by the European Commission, including the European Commission’s Knowledge Centres and the Knowledge for Policy Platform hosted by the Joint Research Centre.

DEEPENING THE EUROPEAN RESEARCH AREA

OPEN SCIENCE

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-40: Stepping-up institutional and territorial changes towards open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000. The respective options of the Model Grant Agreement will be applied. Beneficiaries should refer to General Annex B of the Work Programme for further information and guidance. Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from this work programme part subject to the same additional dissemination obligations. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on sustainable institutional and territorial changes towards open and responsible research and innovation;
- A central point of expertise providing services and support for research and innovation institutions, and territories, to open up to society;
- A significant number of institutions and territories in the European Research Area (ERA) become more porous to society, align with the needs, values and expectations of society, improve the excellence of their research and innovation, promote gender equality, and reduce instances of ethical misconduct;
- Reduction in disparities between institutions and territories in terms of their attention to open and responsible research and innovation.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Open and responsible research and innovation practices mainstreamed throughout territorial and institutional settings;

- Increased impact of EU R&I outputs and the conversion of knowledge and ideas into products and services.

Scope: Research and innovation institutions play a key role in creating an enabling environment for opening research and innovation towards society, sharing research outputs, improving research integrity and gender equality, and promoting science education, societal engagement (such as citizen science and other forms of co-design and co-creation) and two-way science communication. At territorial level, interactions between different institutions from across the quadruple helix ⁷⁹, and including societal actors such as civil society organisations and non-governmental organisations, are essential to ensuring that the processes and outcomes of research and innovation are aligned with the needs, values and expectations of society.

However, European research and innovation actors lack a consolidated evidence base and guidance based on EU investments in this area to date to support them, there are significant differences in attention to different aspects of responsibility and openness between institutions and territories, rewards and incentives at the workforce and institutional level are often misaligned or even disfavour openness to society, and there is no central point of reference or provider of services and expertise to turn to.

This action consists of three parts, all of which must be addressed:

The first involves consolidating the evidence base and develop innovative guidance and other materials, which can support institutions and territories to implement sustainable institutional changes and open up to society⁸⁰. It should take into account and build on the learning and knowledge developed by Horizon 2020's Science with and for Society programme ⁸¹ and potentially other sources of knowledge.

The second part involves financial support to third parties, by launching 'cascading grant' call(s) to support institutions and territories from across the ERA to implement sustainable institutional changes towards open and responsible research and innovation. This may require consultancy or other kinds of support services to be developed and rolled out to successful institutions. A significant number of institutional changes (e.g. 70-100 individual institutional changes) should be expected in beneficiary organisations and territories. As such, a significant proportion of the funding should be allocated to the 'cascading grant' mechanism. One or more call(s) for proposals should be launched, which could focus on specific disciplines,

⁷⁹ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁰ Institutional changes are characterised as: 1) a change to how the institution governs/structures itself, 2) expected to have meaningful impact within the institution concerned, 3) intended to last beyond the lifetime of funding (i.e. not one-off activities). See <https://op.europa.eu/s/olV2>.

⁸¹ Particularly relevant projects to build upon were supported by: ISSI-5-2014, GARRI-1-2014, ISSI-5-2015, SwafS-04-2016, SwafS-05-2017, SwafS-05-2018-2019, SwafS-14-2018-2019-2020, SwafS-23-2020. Moreover, this action should build on the evidence base for benefits developed by the MoRRI and Super_MoRRI projects. Projects focused on implementing Gender Equality Plans under SwafS (including those supported by topics GERI-4-2014, SwafS-03-2016-2017, SwafS-09-2018-2019-2020) may also be of relevance. The RRI-Tools project, from FP7's Science in Society programme, may also be relevant: <https://rri-tools.eu/>.

MoRRI country clusters⁸², or other pertinent criteria, but with the underlying goal of reducing disparities between institutions and territories in terms of their attention to different dimensions of openness and responsibility.

The third part involves acting as a central point of expertise and support services on open and responsible research and innovation for institutions and projects under Horizon Europe and within the European Research Area. This point of expertise should have appropriate high-level visibility, and the ability to interact and support all parts of the research and innovation system (all parts of quadruple helix, disciplines, sectors). In order to achieve the expected outcomes, international networking is advised to support co-operation on the issue at global level and provide expertise in support of institutions and projects.

The action should evaluate its impacts and develop recommendations useful to policy makers and those responsible for the governance of research and innovation institutions. The action should raise awareness of the benefits of open and responsible research and innovation to organisations across the ERA. It should develop close co-operation with other relevant projects, with a view to fostering collaboration and the early sharing of knowledge and evidence.

HORIZON-WIDERA-2022-ERA-01-41: Increasing the reproducibility of scientific results

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from the same call topic. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁸²

<https://op.europa.eu/s/olV4>

- Structured understanding of the underlying drivers, of concrete and effective interventions - funding, community-based, technical and policy - to increase reproducibility of the results of R&I; and of their benefits;
- Effective solutions, policy-, technical- and practice-based, to increase the reproducibility of R&I results in funding programmes, in communities and in the dissemination of scientific results;
- Greater collaboration, alignment of practices and joint action by stakeholders to increase reproducibility, including but not limited to training, specialised careers and guidelines for best practice.

These outcomes should contribute to medium and long-term impacts:

- Increased proportion of reproducible results from publicly funded R&I;
- Increased re-use of scientific results by research and innovation;
- Greater quality of the scientific production.

Scope: Reproducibility refers to the possibility for the scientific community to obtain the same results as the originators of a specific finding. As such, reproducibility is core to scientific progress, and there is debate on whether there is a ‘crisis of reproducibility’ in contemporary science. At a time when funding levels for R&I are under scrutiny globally, and societal trust in the outcomes of research and innovation become increasingly essential, there is a need to address inefficiencies in the research process, to avoid useless and costly repetition, to maximise return on investment in R&D&I, to prevent the propagation of mistakes, and to facilitate the translation of results into innovations.

Therefore, this topic aims to fund activities to

- a) determine how increased reproducibility generates gains and savings in the R&I process and improve overall performance - alongside the demonstrated positive effects on their quality, integrity and trust-worthiness, and
- b) find, experiment and mainstream concrete solutions and best-practices to increase the reproducibility of research funded with European taxpayers’ money, including through the more systematic integration of sex and gender as variables whenever relevant.

Consequently, actions should help understand and promote reproducibility by:

- 1) creating an open knowledge base of results, methodologies and interventions on the drivers and consequences of reproducibility for the R&I system; and to fill the main gaps in such knowledge;
- 2) develop, validate, pilot and deploy practices and practical tools for funders, publishers and scientists;

3) promote uptake, greater collaboration, and increased alignment of the activities of stakeholders - scientific and technical communities, publishers and funders among others - to increase reproducibility.

Finally, projects should assist further policy development on reproducibility, based on scoping work by the Commission⁸³. While solutions should be applicable to Europe, attention should be paid to reproducibility in global science.

It is expected that the funded action(s) will adhere to best practices in open science and reproducibility (e.g. re-use existing results, fully document the research process), and provide a final reflection based on their own experience at the forefront of reproducibility.

HORIZON-WIDERA-2022-ERA-01-42: Supporting the development of aligned policies for open access books and monographs

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Improve the understanding of the current landscape of scientific book and monograph publishing in different fields of science in which it plays an important role, and in particular the bottlenecks in strategies and policies for their open access.
- Support aligned funder and institutional policies for open access monographs and books within the open science culture in the European Research Area and facilitate their coordination.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Address and increase equity, diversity and inclusivity in open science practices⁸⁴ inside the European Research Area.

⁸³ i.e. <https://data.europa.eu/doi/10.2777/341654>

- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science.

Scope: Monographs, books and other types of long-text formats are very important outputs in some disciplines, such as in the Social Sciences and the Humanities. Whilst many disciplines rely nearly exclusively on the production of articles, professional advancement requirements, as well as the nature of the research and the writing process in some disciplines, result in the unwavering significance of long-text formats and monographs, both in the digital and in the print formats.

Open access for monographs and other long-text formats has been a slow process in multiple aspects. This is likely because of the higher costs and business models of book publishing, as well as a hesitancy on the side of researcher to trust important parts of their work in terms of volume to the new open access publishing environment. Additionally, funder policies and strategies focus a lot less on monographs than on journal articles, and they are often recommendations and not requirements.

This action aims to support the development of aligned institutional and funder policies and strategies regarding open access to books and monographs in Europe. In this context, the action should support: 1. activities that foster greater understanding of bottlenecks in the development of policies and strategies for open access to books and monographs by institutions and funders; 2. the coordination of policies amongst funders and research institutions, and the sharing of good practices in policies and strategies for open access to books and monographs; 3. actionable and evidence-based recommendations and resources for comprehensive institutional and funder policies for open access to books and monographs. The action may also envisage international cooperation with entities outside the EU Member States and associated countries.

The action should be no longer than 24 months.

HORIZON-WIDERA-2022-ERA-01-44: Developing and piloting training on the practice of open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

⁸⁴ Open science practices may include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to disseminate policy recommendations aimed at relevant research institutions and levels of governance. Beneficiaries must acknowledge and incorporate this obligation in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on open and responsible research and innovation⁸⁵ training for researchers at all stages of their careers across the European Research Area.
- Development and piloting of high-quality training to a significant number of researchers on diverse aspects of open and responsible research and innovation.
- Establishment of a platform for further development of training, mutual learning, and dissemination of recommendations to authorities and institutions responsible for researcher training.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Improved skills leading to greater employability and career prospects for researchers.
- Improvements in the excellence of the science conducted, improved capacity within the European Research Area to tackle societal challenges, greater interaction between science and society, improved overall effectiveness of EU research and innovation funding.
- Improved engagement and cooperation of researchers, with communicators, journalists, industry, policy maker and civil society.

Scope: In order to ensure the excellence of EU research and innovation, the research workforce needs to strengthen skills related to integrity, avoidance of various forms of bias, including gender bias, non-discrimination and inclusion, FAIR data management, data robustness and reproducibility, dissemination and exploitation of results, and interdisciplinary research. It requires skills to communicate science and research results, in the media (including social media) and to policy makers, and skills to participate in public debates. It also requires skills to engage the public to develop research and innovation agenda, the ability

⁸⁵ Responsible research and innovation involves multi-actor and public engagement in research and innovation, easier access to scientific results, the take up of gender and ethics in the research and innovation content and process, and formal and informal science education.

to work in multi-actor collaborations covering all parts of the quadruple helix⁸⁶ where interests and motivation for engaging in research may be diverse, and actively involve citizens in research activities such as citizen science to expand the scope and the potentials of science itself. These skills are needed at all stages of researchers' careers, from undergraduate onwards (including as part of doctoral training).

This action consists of three parts, all of which must be addressed:

The first part consists of consolidating existing evidence⁸⁷ on researcher training on open and responsible research and innovation, at all stages of their careers, from undergraduate onwards (including as part of doctoral training), and identifying gaps in existing practices in the European Research Area. This will include mutual learning activities within and outside the European Research Area to ensure established and emergent good practices are considered. Existing initiatives, such as the European Charter and Code⁸⁸ and the EU Principles for Innovative Doctoral Training⁸⁹, should be taken into account.

The second part consists of developing training modules, courses or other kinds of interventions on open and responsible research and innovation that will be piloted to a significant number of students and researchers in different kinds of research organisations and higher education organisations across Europe, and at all stages of their studies and careers. The learning outcomes will be evaluated, with a view to refining the training ready for more widespread deployment (e.g. at national, institutional levels, or in MSCA actions). Attention should be paid to the gender dimension of the training/learning outcomes, and to ensure that the training is adapted and piloted to researchers of all backgrounds (age, ethnicity, geography, gender, etc.).

The third part consists of establishing a platform, sustainable beyond the lifetime of project funding, to continue knowledge exchange, develop guidance, and further develop training on open and responsible research and innovation. Part of the work must include the wide dissemination of policy recommendations aimed at relevant research institutions and levels of governance.

Working closely with relevant on-going actions, quadruple helix stakeholders, and science outreach stakeholders, is advised. The action is also expected to build on and valorise results from projects already funded under the "Science with and for Society" part of Horizon 2020.

HIGHER EDUCATION INSTITUTIONS AND RESEARCHERS

Proposals are invited against the following topic(s):

⁸⁶ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁷ In addition to relevant national-level initiatives, or even initiatives outside the EU, this includes Horizon 2020 projects supported through topics SEAC-2-2014 and topic SwafS-08-2019-2020 under Science with and for Society; the Horizon 2020 Innovative Training Networks supported through the MSCA-ITN topics as well as the COFUND projects for doctoral programmes under the Marie Skłodowska-Curie Actions, and the Erasmus+ European University Alliances and Horizon 2020 top-up pilot.

⁸⁸ <https://euraxess.ec.europa.eu/jobs/charter>

⁸⁹ <https://www.euraxess.be/belgium/jobs-funding/doctoral-training-principles>

HORIZON-WIDERA-2022-ERA-01-50: Developing an effective ERA talent pipeline

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰

<https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2/Q3 2022

Indicative budget: EUR 1.00 million from the 2022 budget

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2/Q3 2022

Indicative budget: EUR 1.00 million from the 2022 budget

HORIZON-WIDERA-2022-ERA-01-44: Developing and piloting training on the practice of open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

⁸⁴ Open science practices may include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to disseminate policy recommendations aimed at relevant research institutions and levels of governance. Beneficiaries must acknowledge and incorporate this obligation in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on open and responsible research and innovation⁸⁵ training for researchers at all stages of their careers across the European Research Area.
- Development and piloting of high-quality training to a significant number of researchers on diverse aspects of open and responsible research and innovation.
- Establishment of a platform for further development of training, mutual learning, and dissemination of recommendations to authorities and institutions responsible for researcher training.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Improved skills leading to greater employability and career prospects for researchers.
- Improvements in the excellence of the science conducted, improved capacity within the European Research Area to tackle societal challenges, greater interaction between science and society, improved overall effectiveness of EU research and innovation funding.
- Improved engagement and cooperation of researchers, with communicators, journalists, industry, policy maker and civil society.

Scope: In order to ensure the excellence of EU research and innovation, the research workforce needs to strengthen skills related to integrity, avoidance of various forms of bias, including gender bias, non-discrimination and inclusion, FAIR data management, data robustness and reproducibility, dissemination and exploitation of results, and interdisciplinary research. It requires skills to communicate science and research results, in the media (including social media) and to policy makers, and skills to participate in public debates. It also requires skills to engage the public to develop research and innovation agenda, the ability

⁸⁵ Responsible research and innovation involves multi-actor and public engagement in research and innovation, easier access to scientific results, the take up of gender and ethics in the research and innovation content and process, and formal and informal science education.

to work in multi-actor collaborations covering all parts of the quadruple helix⁸⁶ where interests and motivation for engaging in research may be diverse, and actively involve citizens in research activities such as citizen science to expand the scope and the potentials of science itself. These skills are needed at all stages of researchers' careers, from undergraduate onwards (including as part of doctoral training).

This action consists of three parts, all of which must be addressed:

The first part consists of consolidating existing evidence⁸⁷ on researcher training on open and responsible research and innovation, at all stages of their careers, from undergraduate onwards (including as part of doctoral training), and identifying gaps in existing practices in the European Research Area. This will include mutual learning activities within and outside the European Research Area to ensure established and emergent good practices are considered. Existing initiatives, such as the European Charter and Code⁸⁸ and the EU Principles for Innovative Doctoral Training⁸⁹, should be taken into account.

The second part consists of developing training modules, courses or other kinds of interventions on open and responsible research and innovation that will be piloted to a significant number of students and researchers in different kinds of research organisations and higher education organisations across Europe, and at all stages of their studies and careers. The learning outcomes will be evaluated, with a view to refining the training ready for more widespread deployment (e.g. at national, institutional levels, or in MSCA actions). Attention should be paid to the gender dimension of the training/learning outcomes, and to ensure that the training is adapted and piloted to researchers of all backgrounds (age, ethnicity, geography, gender, etc.).

The third part consists of establishing a platform, sustainable beyond the lifetime of project funding, to continue knowledge exchange, develop guidance, and further develop training on open and responsible research and innovation. Part of the work must include the wide dissemination of policy recommendations aimed at relevant research institutions and levels of governance.

Working closely with relevant on-going actions, quadruple helix stakeholders, and science outreach stakeholders, is advised. The action is also expected to build on and valorise results from projects already funded under the "Science with and for Society" part of Horizon 2020.

HIGHER EDUCATION INSTITUTIONS AND RESEARCHERS

Proposals are invited against the following topic(s):

⁸⁶ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁷ In addition to relevant national-level initiatives, or even initiatives outside the EU, this includes Horizon 2020 projects supported through topics SEAC-2-2014 and topic SwafS-08-2019-2020 under Science with and for Society; the Horizon 2020 Innovative Training Networks supported through the MSCA-ITN topics as well as the COFUND projects for doctoral programmes under the Marie Skłodowska-Curie Actions, and the Erasmus+ European University Alliances and Horizon 2020 top-up pilot.

⁸⁸ <https://euraxess.ec.europa.eu/jobs/charter>

⁸⁹ <https://www.euraxess.be/belgium/jobs-funding/doctoral-training-principles>

HORIZON-WIDERA-2022-ERA-01-50: Developing an effective ERA talent pipeline

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰ <https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

HORIZON-WIDERA-2022-ERA-01-32: An experimentation space for the uptake and use of R&I results for EU resilience and future preparedness

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60 000.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- A methodology and toolbox to design and implement testing of policy relevant findings stemming from European R&I that can contribute to EU resilience and future preparedness.
- A knowledge base of EU research findings, with high capacity to inform policy and engage citizens and research communities, that are tested, including the methodologies for testing (small scale experiments, randomised control trials etc).
- Lessons learnt to enhance the use of R&I results to enable fast response in the face of future crises and strengthen economic and social resilience, for example through

supporting policy reforms, new regulation, social innovation, behavioural change, new technology adoption and the integration of the gender dimension.

Scope: R&I results and new scientific knowledge can inform policy making and help address societal challenges through new technological and societal solutions, as well as through providing policy recommendations and policy options with a proper (scientific) understanding of the underlying conditions. Testing policy recommendations and findings of scientific research through experiments and novel methodologies increases understanding of the implications, risks and opportunities of possible new solutions, enabling societies to respond faster and more effectively to crises and build resilience and social cohesion.

This action aims at increasing the visibility and fostering the use of R&I results with high policy relevance to contribute to the recovery and resilience of Europe, while engaging research communities and citizens in an “experimentation space” for new, science based, socially inclusive and gender responsive policy initiatives and solutions.

The action will match policy relevant findings for EU resilience stemming from research (such as from EU H2020, HE and previous programmes as well as other EU programmes, and national level publicly funded research) with national, regional and local needs, and carry out the experimentation phase in co-creation with the research communities and citizens. At the core of the action is the design of appropriate trial mechanisms that will test research findings which can be translated to policy and new societal solutions, and thereby provide policy makers and citizens with a high degree of confidence and trust in responding to new challenges.

The project consortium may consider links with related knowledge management activities by the European Commission, including the European Commission’s Knowledge Centres and the Knowledge for Policy Platform hosted by the Joint Research Centre.

DEEPENING THE EUROPEAN RESEARCH AREA

OPEN SCIENCE

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-40: Stepping-up institutional and territorial changes towards open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 5.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000. The respective options of the Model Grant Agreement will be applied. Beneficiaries should refer to General Annex B of the Work Programme for further information and guidance. Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from this work programme part subject to the same additional dissemination obligations. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on sustainable institutional and territorial changes towards open and responsible research and innovation;
- A central point of expertise providing services and support for research and innovation institutions, and territories, to open up to society;
- A significant number of institutions and territories in the European Research Area (ERA) become more porous to society, align with the needs, values and expectations of society, improve the excellence of their research and innovation, promote gender equality, and reduce instances of ethical misconduct;
- Reduction in disparities between institutions and territories in terms of their attention to open and responsible research and innovation.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Open and responsible research and innovation practices mainstreamed throughout territorial and institutional settings;

- Increased impact of EU R&I outputs and the conversion of knowledge and ideas into products and services.

Scope: Research and innovation institutions play a key role in creating an enabling environment for opening research and innovation towards society, sharing research outputs, improving research integrity and gender equality, and promoting science education, societal engagement (such as citizen science and other forms of co-design and co-creation) and two-way science communication. At territorial level, interactions between different institutions from across the quadruple helix ⁷⁹, and including societal actors such as civil society organisations and non-governmental organisations, are essential to ensuring that the processes and outcomes of research and innovation are aligned with the needs, values and expectations of society.

However, European research and innovation actors lack a consolidated evidence base and guidance based on EU investments in this area to date to support them, there are significant differences in attention to different aspects of responsibility and openness between institutions and territories, rewards and incentives at the workforce and institutional level are often misaligned or even disfavour openness to society, and there is no central point of reference or provider of services and expertise to turn to.

This action consists of three parts, all of which must be addressed:

The first involves consolidating the evidence base and develop innovative guidance and other materials, which can support institutions and territories to implement sustainable institutional changes and open up to society⁸⁰. It should take into account and build on the learning and knowledge developed by Horizon 2020's Science with and for Society programme ⁸¹ and potentially other sources of knowledge.

The second part involves financial support to third parties, by launching 'cascading grant' call(s) to support institutions and territories from across the ERA to implement sustainable institutional changes towards open and responsible research and innovation. This may require consultancy or other kinds of support services to be developed and rolled out to successful institutions. A significant number of institutional changes (e.g. 70-100 individual institutional changes) should be expected in beneficiary organisations and territories. As such, a significant proportion of the funding should be allocated to the 'cascading grant' mechanism. One or more call(s) for proposals should be launched, which could focus on specific disciplines,

⁷⁹ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁰ Institutional changes are characterised as: 1) a change to how the institution governs/structures itself, 2) expected to have meaningful impact within the institution concerned, 3) intended to last beyond the lifetime of funding (i.e. not one-off activities). See <https://op.europa.eu/s/olV2>.

⁸¹ Particularly relevant projects to build upon were supported by: ISSI-5-2014, GARRI-1-2014, ISSI-5-2015, SwafS-04-2016, SwafS-05-2017, SwafS-05-2018-2019, SwafS-14-2018-2019-2020, SwafS-23-2020. Moreover, this action should build on the evidence base for benefits developed by the MoRRI and Super_MoRRI projects. Projects focused on implementing Gender Equality Plans under SwafS (including those supported by topics GERI-4-2014, SwafS-03-2016-2017, SwafS-09-2018-2019-2020) may also be of relevance. The RRI-Tools project, from FP7's Science in Society programme, may also be relevant: <https://rri-tools.eu/>.

MoRRI country clusters⁸², or other pertinent criteria, but with the underlying goal of reducing disparities between institutions and territories in terms of their attention to different dimensions of openness and responsibility.

The third part involves acting as a central point of expertise and support services on open and responsible research and innovation for institutions and projects under Horizon Europe and within the European Research Area. This point of expertise should have appropriate high-level visibility, and the ability to interact and support all parts of the research and innovation system (all parts of quadruple helix, disciplines, sectors). In order to achieve the expected outcomes, international networking is advised to support co-operation on the issue at global level and provide expertise in support of institutions and projects.

The action should evaluate its impacts and develop recommendations useful to policy makers and those responsible for the governance of research and innovation institutions. The action should raise awareness of the benefits of open and responsible research and innovation to organisations across the ERA. It should develop close co-operation with other relevant projects, with a view to fostering collaboration and the early sharing of knowledge and evidence.

HORIZON-WIDERA-2022-ERA-01-41: Increasing the reproducibility of scientific results

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from the same call topic. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁸²

<https://op.europa.eu/s/olV4>

- Structured understanding of the underlying drivers, of concrete and effective interventions - funding, community-based, technical and policy - to increase reproducibility of the results of R&I; and of their benefits;
- Effective solutions, policy-, technical- and practice-based, to increase the reproducibility of R&I results in funding programmes, in communities and in the dissemination of scientific results;
- Greater collaboration, alignment of practices and joint action by stakeholders to increase reproducibility, including but not limited to training, specialised careers and guidelines for best practice.

These outcomes should contribute to medium and long-term impacts:

- Increased proportion of reproducible results from publicly funded R&I;
- Increased re-use of scientific results by research and innovation;
- Greater quality of the scientific production.

Scope: Reproducibility refers to the possibility for the scientific community to obtain the same results as the originators of a specific finding. As such, reproducibility is core to scientific progress, and there is debate on whether there is a ‘crisis of reproducibility’ in contemporary science. At a time when funding levels for R&I are under scrutiny globally, and societal trust in the outcomes of research and innovation become increasingly essential, there is a need to address inefficiencies in the research process, to avoid useless and costly repetition, to maximise return on investment in R&D&I, to prevent the propagation of mistakes, and to facilitate the translation of results into innovations.

Therefore, this topic aims to fund activities to

- a) determine how increased reproducibility generates gains and savings in the R&I process and improve overall performance - alongside the demonstrated positive effects on their quality, integrity and trust-worthiness, and
- b) find, experiment and mainstream concrete solutions and best-practices to increase the reproducibility of research funded with European taxpayers’ money, including through the more systematic integration of sex and gender as variables whenever relevant.

Consequently, actions should help understand and promote reproducibility by:

- 1) creating an open knowledge base of results, methodologies and interventions on the drivers and consequences of reproducibility for the R&I system; and to fill the main gaps in such knowledge;
- 2) develop, validate, pilot and deploy practices and practical tools for funders, publishers and scientists;

3) promote uptake, greater collaboration, and increased alignment of the activities of stakeholders - scientific and technical communities, publishers and funders among others - to increase reproducibility.

Finally, projects should assist further policy development on reproducibility, based on scoping work by the Commission⁸³. While solutions should be applicable to Europe, attention should be paid to reproducibility in global science.

It is expected that the funded action(s) will adhere to best practices in open science and reproducibility (e.g. re-use existing results, fully document the research process), and provide a final reflection based on their own experience at the forefront of reproducibility.

HORIZON-WIDERA-2022-ERA-01-42: Supporting the development of aligned policies for open access books and monographs

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Improve the understanding of the current landscape of scientific book and monograph publishing in different fields of science in which it plays an important role, and in particular the bottlenecks in strategies and policies for their open access.
- Support aligned funder and institutional policies for open access monographs and books within the open science culture in the European Research Area and facilitate their coordination.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Address and increase equity, diversity and inclusivity in open science practices⁸⁴ inside the European Research Area.

⁸³ i.e. <https://data.europa.eu/doi/10.2777/341654>

- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science.

Scope: Monographs, books and other types of long-text formats are very important outputs in some disciplines, such as in the Social Sciences and the Humanities. Whilst many disciplines rely nearly exclusively on the production of articles, professional advancement requirements, as well as the nature of the research and the writing process in some disciplines, result in the unwavering significance of long-text formats and monographs, both in the digital and in the print formats.

Open access for monographs and other long-text formats has been a slow process in multiple aspects. This is likely because of the higher costs and business models of book publishing, as well as a hesitancy on the side of researcher to trust important parts of their work in terms of volume to the new open access publishing environment. Additionally, funder policies and strategies focus a lot less on monographs than on journal articles, and they are often recommendations and not requirements.

This action aims to support the development of aligned institutional and funder policies and strategies regarding open access to books and monographs in Europe. In this context, the action should support: 1. activities that foster greater understanding of bottlenecks in the development of policies and strategies for open access to books and monographs by institutions and funders; 2. the coordination of policies amongst funders and research institutions, and the sharing of good practices in policies and strategies for open access to books and monographs; 3. actionable and evidence-based recommendations and resources for comprehensive institutional and funder policies for open access to books and monographs. The action may also envisage international cooperation with entities outside the EU Member States and associated countries.

The action should be no longer than 24 months.

HORIZON-WIDERA-2022-ERA-01-44: Developing and piloting training on the practice of open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

⁸⁴ Open science practices may include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to disseminate policy recommendations aimed at relevant research institutions and levels of governance. Beneficiaries must acknowledge and incorporate this obligation in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on open and responsible research and innovation⁸⁵ training for researchers at all stages of their careers across the European Research Area.
- Development and piloting of high-quality training to a significant number of researchers on diverse aspects of open and responsible research and innovation.
- Establishment of a platform for further development of training, mutual learning, and dissemination of recommendations to authorities and institutions responsible for researcher training.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Improved skills leading to greater employability and career prospects for researchers.
- Improvements in the excellence of the science conducted, improved capacity within the European Research Area to tackle societal challenges, greater interaction between science and society, improved overall effectiveness of EU research and innovation funding.
- Improved engagement and cooperation of researchers, with communicators, journalists, industry, policy maker and civil society.

Scope: In order to ensure the excellence of EU research and innovation, the research workforce needs to strengthen skills related to integrity, avoidance of various forms of bias, including gender bias, non-discrimination and inclusion, FAIR data management, data robustness and reproducibility, dissemination and exploitation of results, and interdisciplinary research. It requires skills to communicate science and research results, in the media (including social media) and to policy makers, and skills to participate in public debates. It also requires skills to engage the public to develop research and innovation agenda, the ability

⁸⁵ Responsible research and innovation involves multi-actor and public engagement in research and innovation, easier access to scientific results, the take up of gender and ethics in the research and innovation content and process, and formal and informal science education.

to work in multi-actor collaborations covering all parts of the quadruple helix⁸⁶ where interests and motivation for engaging in research may be diverse, and actively involve citizens in research activities such as citizen science to expand the scope and the potentials of science itself. These skills are needed at all stages of researchers' careers, from undergraduate onwards (including as part of doctoral training).

This action consists of three parts, all of which must be addressed:

The first part consists of consolidating existing evidence⁸⁷ on researcher training on open and responsible research and innovation, at all stages of their careers, from undergraduate onwards (including as part of doctoral training), and identifying gaps in existing practices in the European Research Area. This will include mutual learning activities within and outside the European Research Area to ensure established and emergent good practices are considered. Existing initiatives, such as the European Charter and Code⁸⁸ and the EU Principles for Innovative Doctoral Training⁸⁹, should be taken into account.

The second part consists of developing training modules, courses or other kinds of interventions on open and responsible research and innovation that will be piloted to a significant number of students and researchers in different kinds of research organisations and higher education organisations across Europe, and at all stages of their studies and careers. The learning outcomes will be evaluated, with a view to refining the training ready for more widespread deployment (e.g. at national, institutional levels, or in MSCA actions). Attention should be paid to the gender dimension of the training/learning outcomes, and to ensure that the training is adapted and piloted to researchers of all backgrounds (age, ethnicity, geography, gender, etc.).

The third part consists of establishing a platform, sustainable beyond the lifetime of project funding, to continue knowledge exchange, develop guidance, and further develop training on open and responsible research and innovation. Part of the work must include the wide dissemination of policy recommendations aimed at relevant research institutions and levels of governance.

Working closely with relevant on-going actions, quadruple helix stakeholders, and science outreach stakeholders, is advised. The action is also expected to build on and valorise results from projects already funded under the "Science with and for Society" part of Horizon 2020.

HIGHER EDUCATION INSTITUTIONS AND RESEARCHERS

Proposals are invited against the following topic(s):

⁸⁶ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁷ In addition to relevant national-level initiatives, or even initiatives outside the EU, this includes Horizon 2020 projects supported through topics SEAC-2-2014 and topic SwafS-08-2019-2020 under Science with and for Society; the Horizon 2020 Innovative Training Networks supported through the MSCA-ITN topics as well as the COFUND projects for doctoral programmes under the Marie Skłodowska-Curie Actions, and the Erasmus+ European University Alliances and Horizon 2020 top-up pilot.

⁸⁸ <https://euraxess.ec.europa.eu/jobs/charter>

⁸⁹ <https://www.euraxess.be/belgium/jobs-funding/doctoral-training-principles>

HORIZON-WIDERA-2022-ERA-01-50: Developing an effective ERA talent pipeline

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰

<https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	<i>from 01.020402</i>	<i>19.20</i>	<i>19.40</i>
Estimated total budget		456.20	478.35

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

HORIZON-WIDERA-2022-ERA-01-41: Increasing the reproducibility of scientific results

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 4.00 million.
<i>Type of Action</i>	Research and Innovation Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to freely share, in a timely manner and as appropriate, all relevant results with the other grants awarded from the same call topic. Beneficiaries must acknowledge and incorporate these obligations in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Structured understanding of the underlying drivers, of concrete and effective interventions - funding, community-based, technical and policy - to increase reproducibility of the results of R&I; and of their benefits;
- Effective solutions, policy-, technical- and practice-based, to increase the reproducibility of R&I results in funding programmes, in communities and in the dissemination of scientific results;
- Greater collaboration, alignment of practices and joint action by stakeholders to increase reproducibility, including but not limited to training, specialised careers and guidelines for best practice.

These outcomes should contribute to medium and long-term impacts:

- Increased proportion of reproducible results from publicly funded R&I;
- Increased re-use of scientific results by research and innovation;
- Greater quality of the scientific production.

Scope: Reproducibility refers to the possibility for the scientific community to obtain the same results as the originators of a specific finding. As such, reproducibility is core to scientific progress, and there is debate on whether there is a ‘crisis of reproducibility’ in contemporary science. At a time when funding levels for R&I are under scrutiny globally, and societal trust in the outcomes of research and innovation become increasingly essential, there is a need to address inefficiencies in the research process, to avoid useless and costly repetition, to maximise return on investment in R&D&I, to prevent the propagation of mistakes, and to facilitate the translation of results into innovations.

Therefore, this topic aims to fund activities to

- a) determine how increased reproducibility generates gains and savings in the R&I process and improve overall performance - alongside the demonstrated positive effects on their quality, integrity and trust-worthiness, and
- b) find, experiment and mainstream concrete solutions and best-practices to increase the reproducibility of research funded with European taxpayers’ money, including through the more systematic integration of sex and gender as variables whenever relevant.

Consequently, actions should help understand and promote reproducibility by:

- 1) creating an open knowledge base of results, methodologies and interventions on the drivers and consequences of reproducibility for the R&I system; and to fill the main gaps in such knowledge;
- 2) develop, validate, pilot and deploy practices and practical tools for funders, publishers and scientists;

3) promote uptake, greater collaboration, and increased alignment of the activities of stakeholders - scientific and technical communities, publishers and funders among others - to increase reproducibility.

Finally, projects should assist further policy development on reproducibility, based on scoping work by the Commission⁸³. While solutions should be applicable to Europe, attention should be paid to reproducibility in global science.

It is expected that the funded action(s) will adhere to best practices in open science and reproducibility (e.g. re-use existing results, fully document the research process), and provide a final reflection based on their own experience at the forefront of reproducibility.

HORIZON-WIDERA-2022-ERA-01-42: Supporting the development of aligned policies for open access books and monographs

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Improve the understanding of the current landscape of scientific book and monograph publishing in different fields of science in which it plays an important role, and in particular the bottlenecks in strategies and policies for their open access.
- Support aligned funder and institutional policies for open access monographs and books within the open science culture in the European Research Area and facilitate their coordination.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Address and increase equity, diversity and inclusivity in open science practices⁸⁴ inside the European Research Area.

⁸³ i.e. <https://data.europa.eu/doi/10.2777/341654>

- Increased capacity in the EU R&I system to conduct open science and to set it as a *modus operandi* of modern science.

Scope: Monographs, books and other types of long-text formats are very important outputs in some disciplines, such as in the Social Sciences and the Humanities. Whilst many disciplines rely nearly exclusively on the production of articles, professional advancement requirements, as well as the nature of the research and the writing process in some disciplines, result in the unwavering significance of long-text formats and monographs, both in the digital and in the print formats.

Open access for monographs and other long-text formats has been a slow process in multiple aspects. This is likely because of the higher costs and business models of book publishing, as well as a hesitancy on the side of researcher to trust important parts of their work in terms of volume to the new open access publishing environment. Additionally, funder policies and strategies focus a lot less on monographs than on journal articles, and they are often recommendations and not requirements.

This action aims to support the development of aligned institutional and funder policies and strategies regarding open access to books and monographs in Europe. In this context, the action should support: 1. activities that foster greater understanding of bottlenecks in the development of policies and strategies for open access to books and monographs by institutions and funders; 2. the coordination of policies amongst funders and research institutions, and the sharing of good practices in policies and strategies for open access to books and monographs; 3. actionable and evidence-based recommendations and resources for comprehensive institutional and funder policies for open access to books and monographs. The action may also envisage international cooperation with entities outside the EU Member States and associated countries.

The action should be no longer than 24 months.

HORIZON-WIDERA-2022-ERA-01-44: Developing and piloting training on the practice of open and responsible research and innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.

⁸⁴ Open science practices may include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Beneficiaries must make proactive efforts to disseminate policy recommendations aimed at relevant research institutions and levels of governance. Beneficiaries must acknowledge and incorporate this obligation in the proposal, outlining the efforts they will make towards meeting them, and in Annex I to the Grant Agreement.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated evidence base on open and responsible research and innovation⁸⁵ training for researchers at all stages of their careers across the European Research Area.
- Development and piloting of high-quality training to a significant number of researchers on diverse aspects of open and responsible research and innovation.
- Establishment of a platform for further development of training, mutual learning, and dissemination of recommendations to authorities and institutions responsible for researcher training.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Improved skills leading to greater employability and career prospects for researchers.
- Improvements in the excellence of the science conducted, improved capacity within the European Research Area to tackle societal challenges, greater interaction between science and society, improved overall effectiveness of EU research and innovation funding.
- Improved engagement and cooperation of researchers, with communicators, journalists, industry, policy maker and civil society.

Scope: In order to ensure the excellence of EU research and innovation, the research workforce needs to strengthen skills related to integrity, avoidance of various forms of bias, including gender bias, non-discrimination and inclusion, FAIR data management, data robustness and reproducibility, dissemination and exploitation of results, and interdisciplinary research. It requires skills to communicate science and research results, in the media (including social media) and to policy makers, and skills to participate in public debates. It also requires skills to engage the public to develop research and innovation agenda, the ability

⁸⁵ Responsible research and innovation involves multi-actor and public engagement in research and innovation, easier access to scientific results, the take up of gender and ethics in the research and innovation content and process, and formal and informal science education.

to work in multi-actor collaborations covering all parts of the quadruple helix⁸⁶ where interests and motivation for engaging in research may be diverse, and actively involve citizens in research activities such as citizen science to expand the scope and the potentials of science itself. These skills are needed at all stages of researchers' careers, from undergraduate onwards (including as part of doctoral training).

This action consists of three parts, all of which must be addressed:

The first part consists of consolidating existing evidence⁸⁷ on researcher training on open and responsible research and innovation, at all stages of their careers, from undergraduate onwards (including as part of doctoral training), and identifying gaps in existing practices in the European Research Area. This will include mutual learning activities within and outside the European Research Area to ensure established and emergent good practices are considered. Existing initiatives, such as the European Charter and Code⁸⁸ and the EU Principles for Innovative Doctoral Training⁸⁹, should be taken into account.

The second part consists of developing training modules, courses or other kinds of interventions on open and responsible research and innovation that will be piloted to a significant number of students and researchers in different kinds of research organisations and higher education organisations across Europe, and at all stages of their studies and careers. The learning outcomes will be evaluated, with a view to refining the training ready for more widespread deployment (e.g. at national, institutional levels, or in MSCA actions). Attention should be paid to the gender dimension of the training/learning outcomes, and to ensure that the training is adapted and piloted to researchers of all backgrounds (age, ethnicity, geography, gender, etc.).

The third part consists of establishing a platform, sustainable beyond the lifetime of project funding, to continue knowledge exchange, develop guidance, and further develop training on open and responsible research and innovation. Part of the work must include the wide dissemination of policy recommendations aimed at relevant research institutions and levels of governance.

Working closely with relevant on-going actions, quadruple helix stakeholders, and science outreach stakeholders, is advised. The action is also expected to build on and valorise results from projects already funded under the "Science with and for Society" part of Horizon 2020.

HIGHER EDUCATION INSTITUTIONS AND RESEARCHERS

Proposals are invited against the following topic(s):

⁸⁶ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁸⁷ In addition to relevant national-level initiatives, or even initiatives outside the EU, this includes Horizon 2020 projects supported through topics SEAC-2-2014 and topic SwafS-08-2019-2020 under Science with and for Society; the Horizon 2020 Innovative Training Networks supported through the MSCA-ITN topics as well as the COFUND projects for doctoral programmes under the Marie Skłodowska-Curie Actions, and the Erasmus+ European University Alliances and Horizon 2020 top-up pilot.

⁸⁸ <https://euraxess.ec.europa.eu/jobs/charter>

⁸⁹ <https://www.euraxess.be/belgium/jobs-funding/doctoral-training-principles>

HORIZON-WIDERA-2022-ERA-01-50: Developing an effective ERA talent pipeline

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰ <https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from on-going and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2/Q3 2022

Indicative budget: EUR 1.00 million from the 2022 budget

Widening participation and strengthening the European Research Area

	<i>from 01.020402</i>	<i>19.20</i>	<i>19.40</i>
Estimated total budget		456.20	478.35

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Legal entities:

Foundation Leiden European City of Science 2022 , Zijldijk 8, 2362 AE Warmond, Netherlands.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and

operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

Legal entities:

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.

Legal entities:

Université Paris-Saclay, 3 rue Joliot Curie, Bâtiment Breguet, 91190 Gif-sur-Yvette, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: 1st Quarter 2022

Indicative budget: EUR 0.50 million from the 2022 budget

PRIZE

1. EU Award for (Academic) Gender Equality Champions

Expected Outcomes:

- Enable the creation of a European community of academic and research champions in institutional transformation towards inclusive gender equality.
- Strengthening of the inclusiveness and connectivity objectives under the new European Research Area.

Award and certification schemes implemented in different countries, in the EU and beyond, have been shown to be useful tools for advancing gender equality in academic, research and innovation organisations, with some awarding schemes effectively being used as drivers for competition in attracting students and researchers and/or as prerequisite for having access to funding. Building on the feasibility study for a European award/certification system for gender equality in research organisations, including universities, carried out by Horizon 2020 project CASPER, an annual Award scheme is established. The “EU Award for Gender Equality Champions” is meant as a booster and complement to the requirement for higher education and research organisations applying to Horizon Europe to have in place a Gender Equality Plan (GEP) in place, and as an enabler for the new priority on inclusive gender equality plans and the transformation agenda for universities set in the new European Research Area, in synergy with the European Education Area and in line with the new European Strategy for Universities.

The Prize will be awarded to up to four academic or research organisations, and contestants can apply to one among the following three prize categories:

- Sustainable Gender Equality Champions: Organisations that can demonstrate a significant and sustained record of activity and a high level of achievement through the implementation of their GEP;
- Newcomer Gender Equality Champions: Organisations that have recently started implementing a GEP and can demonstrate the most progress in its implementation and achieved results;
- Inclusive Gender Equality Champions: Organisations that have developed the most innovative inclusive GEP addressing intersections with other social categories such as ethnicity, social origin, sexual orientation and gender identity (LGBTI+) or disability.

Each prize winner will receive EUR 0.1 million: EUR 0.4 million maximum in total, from the 2022 budget.

The contestants will have to provide proof of eligibility and a written presentation of their achievements, as well as support their applications with a link to a video. The submission consists of a complete application.

Essential award criteria:

Eligible applications will be evaluated by a Jury consisting of a group of independent experts, with expertise on gender equality plan implementation and intersectional approaches in research and higher education institutions, appointed by the Commission.

The prize will be awarded, after closure of the contest, to the contestants who in the opinion of the jury best address a set of cumulative criteria set for each of the three prize categories.

Eligibility criteria:

The contestant must be a university, higher education institution, or research performing organisation (public or private) located in an EU Member State or a country associated to Horizon Europe¹⁰⁷.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities.

The specific rules of the contest will be published each year by the European Commission (on the [Funding & Tenders Portal](#) but also actively publicised elsewhere to maximise participation), which will directly launch and manage the contest and award the prize based on the judgement of independent experts.

Expected results: The prizes will boost public awareness of the importance of addressing gender equality in academic and research organisations through institutional change, incentivise a high degree of commitment to the implementation of inclusive GEPs, and create a community of champions inspiring other academic and research organisations into become gender equality champions themselves.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Second quarter of 2022
Deadline for submission of application	Third quarter of 2022
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Fourth quarter of 2022

Form of Funding: Prizes

¹⁰⁷ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity and the place of establishment are limited to research performing organisations among legal entities falling under the eligibility criterion on the requirement to have a Gender Equality Plan in place (see General Annexes to the Horizon Europe Work Programme)

Type of Action: Recognition Prize

Indicative timetable: Q4/2022

Indicative budget: EUR 0.40 million from the 2022 budget

2. Horizon impact award

Expected Outcomes:

- To celebrate the successful uptake and use of EU funded project results, thus boosting and promoting their achieved impact.
- To showcase best practices, create role models and inspire R&I beneficiaries to use their research results to create value for the society at large.

The Commission will award on an annual basis a recognition prize to reward beneficiaries that have successfully used their research results to create value for society. The beneficiaries must be able to show proof of effective exploitation and uptake of their research results. This action aims to illustrate the wider socio-economic benefits of the EU investment in R&I and to encourage project beneficiaries to best manage and use their research results.

In particular, six winners will be selected by the evaluation jury for their achievements. The prizes are monetary and each of the six winners will receive EUR 25.000.

Total of six prizes of EUR 0.025 each: EUR 0.15 million from the 2021 budget, and EUR 0.15 million from the 2022 budget.

All applicants are required to submit letter(s) of support coming from the user community that can provide testimony on achieved impact.

Essential award criteria: The prize will be awarded, after closure of the contest, to the contestant(s) who in the opinion of the jury best addresses the following cumulative criteria:

1. Pathway from results to societal benefits:

Applicants will need to detail how the R&I results were directly or indirectly exploited after the lifetime of the project. They will need to describe the activities that were done to ensure that the R&I results lead to societal benefits. They will need to describe the scale and the sustainability of their actions.

2. Achieved impact:

Applicants will need to demonstrate the already existing impact and created societal benefits. They will need to detail concrete examples of how their research results have benefitted the society and who are the user communities that have profited from it. The achieved impact must be already materialized. The letter of support will serve as a testimony of the described impact.

Eligibility criteria: The contest is open to all legal entities (i.e. natural or legal persons, including international organisations) or groups of legal entities that participated as beneficiaries in FP7 or Horizon 2020¹⁰⁸. The projects must have ended by close of the contest¹⁰⁹. Natural persons such as ERC principal investigators or MSCA fellows and legal entities principally created by past beneficiaries for the exploitation of the project results, are also eligible.

Applicants that have already received an EU or Euratom prize cannot receive a second prize for the same activities

For the common Rules of Contest for Prizes please see the [Funding and Tenders Portal](#).

The specific Rules of Contest will be published in 2021¹¹⁰ and in 2022 by the European Commission, which will directly launch and manage the contest and award the prizes based on the judgement of independent experts.

Indicative timetable of contest(s):

Stages	Date and time or indicative period
Opening of the contest	Q1-Q2 (2021/2022)
Deadline for submission of application	Q2-Q3 (2021/2022)
Evaluation and solutions demonstration (if applicable)	N/A
Award of the prize	Q3-Q4 (2021/2022)

Form of Funding: Prizes

Type of Action: Recognition Prize

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 0.15 million from the 2021 budget and EUR 0.15 million from the 2022 budget

EXPERT CONTRACT ACTIONS

1. External expertise for monitoring of Widening and ERA actions

This action will support the use of appointed independent experts for the monitoring of actions (grant agreement, grant decision, public procurement actions, financial instruments)

¹⁰⁸ In accordance with the Horizon Europe Rules for participation, due to the specific policy requirements, to the nature and objectives of the action, the type of legal entity is limited

¹⁰⁹ Refers to the end date of the project as in the Grant Agreement.

¹¹⁰ The Horizon Impact Award has not been implemented in 2021

funded under Horizon Europe and previous Framework Programmes for Research and Innovation and where appropriate include ethics checks.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.60 million from the 2022 budget

2. Monitoring experts for Horizon 2020 legacy

This action is for financing external experts in charge of reviewing legacy projects from Horizon 2020 related to SEWP and Swafs.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.40 million from the 2021 budget and EUR 0.40 million from the 2022 budget

3. Use of individual experts in support of the new ERA's objectives

This action will support the provision of independent expertise to improve the evidence base and collect advice on various aspects related to the Reforming and Enhancing the EU Research and Innovation System and the pursued of the revitalised European Research Area. Individual experts will work in the following domains:

- Experts to contribute to the development of the ERA Scoreboard, to enable monitoring of progress of the realisation of ERA's objectives;
- Experts to map out the academic freedom landscape in Europe and to devise an appropriate system for monitoring its development;
- Experts on Human Resources and researchers' careers, experts on services for researchers such as those of the EURAXESS services network, as well as experts in employment conditions and contracts, social security and remuneration; the experts will contribute to the development of a wide range of actions related to the strengthening of research careers, including researchers' mobility, improvement of the attractiveness of researchers' work conditions, careers, remuneration, assessment;
- Experts in legal matters related to cross-border institutional cooperation, and cooperation within knowledge ecosystems, to support the development of a legal toolbox that facilitates such cooperation;
- Experts in various areas of higher education institutional transformation, in order to monitor transformation and strengthen synergies between education, research and innovation.

The ERA Scoreboard will provide internationally comparable quantitative data and indicators to monitor progress on the realisation of the new ERA at EU and national level, revise priorities and actions in the ERA Roadmap and provide evidence and analysis for the European Semester. The Scoreboard will be issued on an annual basis.

Academic freedom is a prerequisite for scientific excellence and for fostering strong collaborative links between researchers, international partners, scientific organisations and businesses. Academic freedom and the values that it encompasses lead to the creation of resilient R&I ecosystems that cherish, among others, openness, freedom of discussion, autonomy by engaging into open science, peer reviews, research verifiability and replicability, autonomous research agenda setting. The independent experts will contribute to reinforce the future *European Pact for Research and Innovation*, which aims at deepening the implementation of the new ERA's objectives, setting out commonly agreed values and principles and indicating the areas where Member States will jointly develop priority actions. In the frame of the implementation of the "European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers" (C&C), the European Commission relies on independent experts to perform the peer review assessments on which the continuous monitoring mechanism for the Human Resources Strategy for Researchers (HRS4R) award and renewal is based. The creation of a larger pool of experts is envisaged, including in legal, HR, skills, social security, remuneration and employment conditions matters, as well as in science education, skills, financial instruments, innovation, value creation, cooperation and ecosystems, foreign interference, science diplomacy and international competitiveness. This should allow greater flexibility and crossed interactions between various intervention fields, including legal, technical, and operational ones.

Experts in cross-border institutional cooperation and mobility of R&I talents should allow gathering evidence and advice to facilitate cross-border cooperation between higher education institutions and between higher education institutions and other actors of the ecosystem, as well as facilitate circulation of talents.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 1.00 million from the 2021 budget and EUR 1.20 million from the 2022 budget

4. Commission expert group on the impact of the COVID-19 pandemic on gender equality in EU R&I

The Expert Group will deliver a study on the consequences of the COVID-19 crisis and the pandemic containment measures put in place at institutional, national and EU level, on the

work and productivity of women researchers and on gender equality in the EU R&I system in general.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest. This amount is considered to be proportionate to the specific tasks to be assigned to the experts, including the number of meetings to be attended and possible preparatory work.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.20 million from the 2021 budget

5. External expertise for ad hoc tasks related to the implementation of Horizon Europe Ethics Appraisal scheme

This action will support the use of independent experts to advise on or assist with the implementation of the Horizon Europe Ethics Appraisal scheme in view of ensuring and maintaining its quality and effectiveness.

Since the above tasks requires specialised knowledge in research ethics/integrity and the related national and European legal framework (e.g. Data protection and privacy, Informed Consent, Artificial Intelligence and Emerging technologies, Benefit sharing, etc.) a special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget and EUR 0.10 million from the 2022 budget

6. Use of individual expert(s) on ad hoc tasks related to the implementation of the European Valorisation policy

This action will support the use of independent experts to advice on or assist with the implementation of the European Valorisation policy. Individual experts will work in the following areas:

- European knowledge valorisation strategy and specific dimensions and results of its development and implementation, in particular for the delivery of the European Research Area
- IP strategy for European R&I

- Industry-academia knowledge exchange and collaboration
- Citizen engagement and knowledge valorisation through collaboration with cities and communities
- Science and research informing policies
- Other specific aspects with a key role in the European Knowledge Valorisation policy

The tasks require specialised knowledge in R&I Valorisation, intellectual property management, exploitation and dissemination of research results, open innovation, university-business collaboration, citizen engagement for innovation etc.

A special allowance of EUR 450/day will be paid to the experts appointed in their personal capacity who act independently and in the public interest.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative budget: EUR 0.10 million from the 2021 budget

7. Support for policy makers – Horizontal support to the Strategic Coordinating Process for partnerships

This action will offer horizontal support to the strategic coordinating process for partnerships, focusing on issues related to the implementation of the process, mutual learning across the community involved and strengthening the evidence base for strategic discussions.

It will support the continued monitoring of the new approach to European Partnerships, the identification of gaps, emerging opportunities and potential novel approaches in the partnerships landscape and support the preparedness of Member States' and Associated Countries' Horizon Europe participation in the Strategic Coordinating Process. It will contribute to the implementation of the revised policy approach for European Partnerships in Horizon Europe.

Form of Funding: Other budget implementation instruments

Type of Action: Expert contract action

Indicative timetable: Q3 and Q4 2022

Indicative budget: EUR 0.40 million from the 2022 budget

PUBLIC PROCUREMENT

1. EU data for R&I policy

Overall, the set up of an initiative to allow MS and the European Commission to share microdata related to R&I projects, and the progressive integration of R&I project data with

other sources of related data, are fundamental to strengthen ERA and reinforce our research and innovation systems by informing better evidence based policy making. The main tasks are: (1) Data sharing and interoperability of different sources of competitive or non-competitive Research and Innovation funding in Europe, and integration with relevant external data sources; (2) Digital enabling infrastructure; (3) Data analysis and visualisation tools (The EU Dashboard); (4) Capacity building. These activities will be complemented with other data activities aimed at acquiring, interlinking and visualising R&I related data.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

2. Development of the European Innovation Scoreboard

This action will support the continuation and enhancement of the European Innovation Scoreboard, which provides a comparative analysis of innovation performance in EU countries, other European countries, and regional neighbours.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 0.75 million from the 2021 budget

3. Overview of regulatory sandboxes and innovation-enabling approaches to regulation

The study will analyse innovation-enabling approaches to regulation with a focus on regulatory sandboxes. It will establish a state-of-play regarding the use of regulatory sandboxes and experimentation clauses in the European Union, with a benchmarking internationally and vs. other experimentation-enabling instruments. The study will identify key features, benefits and risks related to regulatory sandboxes, present best practices regarding the implementation and evaluation of regulatory sandboxes and analyse how learning from regulatory sandboxes at national level can contribute to evidence-based policy-making at EU level. It will also briefly present an overview of sandboxes and similar instruments in European Programmes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 2021

Indicative budget: EUR 0.20 million from the 2021 budget

4. Implementation of Workshop series with industry and other stakeholders as well as discussions with Member States to prepare ERA common industrial technology roadmaps

This action is a key element to implement priority action 5 under ERA with which the Commission will work with stakeholders from relevant industries to develop by end of 2022 common industrial technology roadmaps which ensure a better transfer of R&I into the real economy and make EU industry more competitive. Industrial technology roadmaps will address R&I for the development of key industrial technology roadmaps across Horizon Europe clusters, ranging from circular industries over health equipment to clean transport and social innovation. They will gauge the prospects of future technological development, collect relevant evidence and co-design R&I investment agendas from basic research to deployment.

The Commission will co-create Industrial technology roadmaps with Member States, industrial companies, RTOs, universities and other stakeholders. The preparation of roadmaps within the deadline stipulated by ERA will require 4-5 meetings per roadmap with industry and other stakeholders and 4-5 meetings with representatives from Member States (ERA Forum for Transition). In order to inform, steer and organize these discussions, the Commission requires support services for the preparation, implementation and summary of discussions, organisation of the meeting venue and administrative support.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 / 2021

Indicative budget: EUR 1.00 million from the 2021 budget

5. Implementation of the Horizon Policy Support Facility

In order to make research and innovation deliver on their full potential to be the key drivers of economic growth and of the transition towards a sustainable society, ambitious policy reforms of national R&I systems are necessary. Through the Policy Support Facility (PSF), the Commission assists Member States and countries associated to Horizon in developing and implementing those reforms. It offers, on a voluntary basis, high-level expertise and tailor-made advice to national public authorities. An overview of past activities can be found at <https://rio.jrc.ec.europa.eu/en/policy-support-facility>. The PSF has demonstrated that it serves as enabler for concrete policy changes.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q2 2022

Indicative budget: EUR 1.50 million from the 2021 budget and EUR 1.50 million from the 2022 budget

6. ERA Talent Platform – the international dimension

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility pattern by supporting researchers in their career development within the ERA, connecting researchers and institutions and improving employability and talent absorption and mobility schemes.

The scope of this action is to complement the ERA Talent Platform with an additional dimension and module addressing international and European researchers living and working outside of Europe. It is expected to consist of the development of a portfolio of support services and associated tools, designed to create transnational ties with researchers and scientific communities within the global R&I ecosystem.

This action will build on the EURAXESS Worldwide structure of international hubs and it is expected to be a physical and virtual networking, knowledge-sharing and advocacy platform of services and tools that will serve as a diplomacy asset internationally and promoting instrument of European R&I landscape, attracting international talent and European researchers back home.

This action should be in strong connection with the European dimension of the Talent Platform. Collaboration is foreseen between EURAXESS Worldwide international hubs and EURAXESS Bridgehead Organisations/ National Coordinators and centers across Europe. It is expected to bridge researchers working outside of Europe to their peers in the home countries, also to activate scientific communities and connect them with business and professional associations, as well as R&I employers and funders.

The international dimension of the ERA Talent Platform should also be fostered through networking events, information sessions or trainings, as well as online instruments and tools, with a mission, *inter alia* to:

- (i) promote the European values and R&I landscape as a favourable environment for excellent research,
- (ii) facilitate knowledge and skills transfer, scientific collaboration and recruiting processes, while lifting obstacles to return,
- (iii) strengthen S&T links with home countries through policy feedback tools and dialogues, as well as

(iv) improve data to a better understanding of European researchers living and working outside of Europe, as well as on mobility and research careers policy in general.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 /2021 - Q3 / 2022

Indicative budget: EUR 2.50 million from the 2021 budget and EUR 2.50 million from the 2022 budget

7. Observatory on Knowledge Ecosystems and Research Careers

This action is expected to build on the preparatory work of the previous Work Programme, in particular the study “*Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures*” (2021), both at the level of knowledge ecosystems, and research careers and mobility. In particular, it should build (1) on the knowledge ecosystems mapping exercise and liaise and coordinate activities with the beneficiaries of the “Testing of the ERA Hub concept – pilot phase” action mentioned elsewhere in this work programme. It will contribute to the understanding of successful knowledge ecosystems across Europe through a recurrent monitoring process and development of an interactive online platform as an Observatory on Knowledge Ecosystems and ERA Hubs testing, endorsing and implementing structures. Next to this, (2) it will need to enable real-time monitoring of national systems of remuneration and employment conditions, social security policies, portability of grants and pensions, as well as research mobility patterns of researchers, both geographically and intersectoral mobility. The observatory should integrate, analyse and map data related to the emergence of ecosystem actors engaged in knowledge production, circulation and use and will reflect how they interact, network and coordinate each other on common agendas, smart specialization strategies, value chains, etc.

Four main targets are foreseen:

- Single actors in knowledge ecosystems (higher education institutions, research organisations, business, other actors)
- Ecosystems (platforms, collaborations, and other structures between above mentioned actors)
- ERA Hubs (structures and practices enabling interactions between knowledge ecosystems), and how the concept helps the ecosystems to work and interact better
- Tracking of researchers in terms of mobility, careers, skills, and working conditions

This action is expected to ensure a recurrent stock taking exercise of existing knowledge ecosystems, including, but not limited to, ERA Hubs, endorsing and implementing collaboration capacities (platforms and other structures of cooperation between ecosystem

actors) at European, national and regional level. The exercise needs to be based on surveys, data collection processes and tools, as well as analyses that need to provide quantitative and qualitative high-level insights, such as on the available types of structures, functions, expertise, the geographical coverage and gaps in the territory, the broader context in which they are functioning, including framework conditions, investment and key operational characteristics.

The Observatory should function as an online platform and real-time assessment of the state of play, reflecting the inventory of knowledge ecosystem actors according to predefined criteria as set in above mentioned Knowledge Ecosystems study. It should also propose a forward-looking perspective to complement and reinforce the ecosystem landscape and maximize its impact. It should identify challenges and needs in order to fill in the gaps in the territory, any white space where no such capacities are currently active, and the gaps in expertise and best practices with a view to mainstream them. Benchmarking in the broader geopolitical context (e.g. Silicon Valley) should be also provided.

Expected impact: Actions are expected to contribute to the following outcomes:

- Provide evidence-based policy support through recurrent monitoring, data collection and analysis on knowledge ecosystem actors across Europe through dedicated processes and tools.
- Gain insight into the dynamics and evolution of the knowledge ecosystems across Europe and measure progress in terms of geographical coverage, patterns of cooperation, interaction, networking and functioning at European, national and regional level;
- Measure progress of testing and implementing the ERA Hubs concept, as well as identify gaps in the territory where such actions could be further needed and stimulated;
- Gain insight in the mobility of researchers, both in terms of the regional/national capacity of attracting and retaining R&I talents, and flow-through of talents between sectors;
- Measure progress of countries, regions, and institutions, in terms of acquisition of new skills and competences by early-career researchers, matching skills needs of employers, in terms of working conditions (remuneration, contract duration, social security provisions), and in terms of research careers and career assessment.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2022

Indicative budget: EUR 2.75 million from the 2022 budget

8. Development of the ERA Talent Platform: website, proof of concept, online services, design, maintenance, communication

EURAXESS is one of the key initiatives enhancing researcher careers and, as such, is one of the operational instruments of the European Research Area (ERA). It particularly contributes to removing the barriers to mobility and making Europe more attractive to researchers. As an ERA implementation measure, the EURAXESS portal and instruments under its umbrella will be expanded towards a comprehensive recruitment, career development and social networking web-platform - ERA Talent Platform, dedicated to researchers and institutions seeking for R&I talent or willing to improve their institutional talent management policies and practices.

This action will build on the preparatory work under the previous Work Programme, in particular the Study on ERA Priority 3 (*“Taking stock, evaluating the achievements and identifying the way forward for the ERA Priority 3 policy measures with a focus on European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers (C&C), the Human Resources Strategy for Researchers (HRS4R) and EURAXESS”*, 2020). The newly designed portal is expected to support institutional transformations on recruitment, working conditions and career development of researchers, and it should be aligned to the reviewed European Charter for Researchers and the Code of Conduct for the Recruitment of Researchers, as well as the updated Skills Agenda. It should also be interoperable with other European websites and platforms such as EURES and the new Europass, as well as adopt new functionalities required in line with the European Skills, Competences Qualifications and Occupations (ESCO), the enhanced framework of research careers, ERC panel descriptors, etc.

The primary purpose of the ERA Talent Platform is to create a virtual hub for researchers and institutions, R&I employers and funders. The newly designed EURAXESS website should be seen as an interface that facilitates matching between researchers and employers, candidates and jobs, beneficiaries and benefits, research and funding. The action will also develop activities to provide a new facelift to sections of the website and the instruments under its umbrella, *inter alia* additional modules for RESAVER and the upgrade of the Human Resources Strategy for Researchers (HRS4R) e-tool based on the Charter and Code future revisions and developments. The ERA Talent Platform is also expected to integrate an additional online instrument - a portal gathering EU and national programmes and schemes for intersectoral mobility, which should provide easy access for individuals who want to engage into intersectoral mobility or want to be employed as intermediate between academic and non-academic sector, notably businesses.

The secondary purpose of the newly designed website is to create tools that facilitate automatized data gathering on researchers, research careers, and institutions (R&I employers and funders), in order to allow the Commission to produce high quality data and evidence in support of future ERA policy developments, relevant legislation and actions.

This action requires collaboration with a large group of stakeholders, including EURAXESS Bridgehead Organisations/ National Coordinators, national portal administrators and

EURAXESS Worldwide. It should encompass different activities, such as the development of a proof of concept with the re-conceptualisation of the EURAXESS portal and associated national portals and tools under its umbrella, graphical and functional enhancements, as well as technical development and maintenance. Activities should also include services by external information system provider(s) who, on the basis of inputs provided by the responsible Commission services, guarantee the smooth running of the platform.

Web communication and online promotion activities with stakeholders related to the rollout of the newly designed platform and the portals and tools under its umbrella should also be foreseen as part of this action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021 and Q3 2022

Indicative budget: EUR 2.75 million from the 2021 budget and EUR 1.00 million from the 2022 budget

9. Technical support to Retirement Savings Vehicle for European Research Institutions and research performing individuals (RESAVER)

As asserted in Article 22 of the Universal Declaration of Human Rights, everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality. Nevertheless social security in most member states is under pressure and mobile employees, researchers in particular, experience additional obstacles in accumulating an adequate amount of pension provisions. Most prominent issues experienced by mobile researchers in relation to accumulation of occupational pensions (second pillar) are the vesting period, transferability of assets and administrative burden during accumulation phase and at retirement.

RESAVER Pension Fund has been created with the ambition to tackle the issues listed above by facilitating free circulation of researchers and removing pension as an obstacle to mobility which corresponds to the strategic objectives of the Union policy as stipulated in Article 179 TFEU on the establishment of a European Research Area.

RESAVER Occupational fund became operational in May 2017 and since then the fund has welcomed research organisations from Hungary, Austria, Netherlands, Italy and Cyprus. In parallel with geographical expansion, RESAVER has the ambition to engage in mutually beneficial collaborations with local occupational pension funds for the benefit of mobile employees. In order to answer to the needs of mobile researchers that do not receive occupational pension employee benefits, or receive an insufficient level of contributions, a personal pension product is expected to be developed that should utilise the existing structure to the extent possible. In addition, investment strategy should be fine-tuned continuously in

order to correspond to the specific needs of researchers and research performing organisations.

In this context following technical support is needed: pension fund management, implementation of additional countries and organisations in the pension fund, providing advice to the board concerning the legal framework, coordinate the development of a third pillar product, support the project in ad hoc tasks, contribute to the establishment of partnerships with local pension funds and coordination of investment strategy adjustments.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4 2021

Indicative budget: EUR 1.00 million from the 2021 budget

10. Monitoring and evaluating the Horizon 2020 complementary support for the European Universities initiative

The European Universities initiative piloted under Erasmus+ and supported under Horizon 2020 offers a testbed for the Higher Education Transformation Agenda to support modernisation of higher education institutions, and explore new integrated ways of cooperation between universities and with other actors in their surrounding ecosystem. In view of the potential full deployment of the European Universities initiative as of 2023, the Commission will monitor progress and identify and address remaining barriers to the transformation agenda.

This action is expected to focus on the R&I dimension of the pilot projects and needs to be implemented in synergy with a similar exercise for the education dimension.

The analysis should include progress made by the project portfolio on areas in the transformation agenda, and in implementing measures for borderless cooperation and circulation of knowledge and talents. Project(s) are expected to provide recommendations to developing future effective synergies with the Erasmus programme and with national or regional funding mechanisms.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 / 2021

Indicative budget: EUR 0.50 million from the 2021 budget

11. Studies and communication

Activities should support the implementation of the ERA Communication objectives and may include studies, support and communication activities that are needed to analyse and enhance the EU space R&I environment, for example

- higher education in the EU versus needs of the space R&I community;
- dissemination of scientific results;
- analysis of the portfolio of EU-funded projects in the field of research careers, universities, research assessment, researcher mobility;
- collection of project feedback, in particular with respect to key exploitable results;
- organisational support for consulting the R&I stakeholders community on R&I needs;
- production and dissemination of communication material and the organisation of events related the ERA, synergies with the EEA, European R&I agendas and Horizon Europe;
- support to Member States ensuring coherent communication activities on ***the implementation of the ERA policy agenda*** across target groups.

Activities are expected to include surveys as appropriate implemented through public procurement, and/or appointing (groups of) independent experts. These limited numbers of contracts may be implemented on the basis of framework contracts, in order to further ensure that the Commission is provided with appropriate and timely analyses, which in turn should facilitate the proper integration of policy studies into the preparation of new policy initiatives.

Cooperation with the presidencies of the Council of the European Union and stakeholders is envisaged and could include direct support to ERA-related presidency events.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3 2022

Indicative budget: EUR 0.95 million from the 2022 budget

12. Monitoring gender equality in Research and Innovation - Development, implementation and dissemination of indicators (She Figures)'

The European Commission, in cooperation with the Member States, will continue collecting sex-disaggregated data and monitoring with appropriate indicators, the implementation of gender policies, objectives, guiding targets and actions at institutional, national and EU level. The study will update data and indicators on human resources in Science and Technology, Research & Development personnel, seniority grades, education, work-life balance, the

inclusion of the gender dimension in research and innovation content, boards' composition, funds, institutional change, gender and innovation, collected insofar.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2 / 2022

Indicative budget: EUR 0.50 million from the 2021 budget

13. Service Facility in Support of the Strategic Development of International Cooperation in Research and Innovation

The Strategic Development of International Cooperation in Research and Innovation aims to provide services that support the policy development, priority setting, follow-up and implementation of the strategy for international cooperation in research and innovation.

A new framework contract for services will be launched and it would reflect on the new political priorities “making Europe stronger in the world” and facilitate strategic international cooperation in research and innovation. It would also support the monitoring of Associated Countries’ alignment with the ERA principles, and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU.

- **Activity description:** international cooperation in R&I is a cross-cutting activity relevant for the whole HE programme. The framework contract should reflect on the new political priorities “making Europe stronger in the world”. The objective is to provide services that support the policy development, priority setting, and follow-up and implementation of the strategy for international cooperation in R&I.
- **Information related to the activity:** it is a contribution to the implementation of international dimension of HE and it would facilitate strengthening the coordination and alignment of the Member States international R&I strategies with the EU. It would also support the monitoring of Associated Countries’ alignment with the ERA principles.
- **Impact:** The activities under the framework contract should result in in-depth and well-informed policy dialogues, improved framework conditions for cooperation in R&I, strategic priority setting for R&I, coordination between internal and external policies and better coordination and alignment with member states’ R&I international strategies

The service facility will be implemented through a new framework contract for services to be launched and signed for a duration of 4 years, with an estimated budget ceiling for its entire duration of 25 million euro, as well as through other existing framework contracts (i.e. for communication related activities). Several specific contracts will be signed under this framework contract.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q4/2021

Indicative budget: EUR 7.00 million from the 2021 budget and EUR 7.00 million from the 2022 budget

14. Implementation of the ERA Monitoring Mechanism

The Council Conclusions on the Future Governance of the European Research Area (ERA) calls on the Commission and Member States to develop a new **ERA online policy platform** with the aim to have a consistent, robust and quality tested national reporting system, taking into account current instruments. Furthermore, the Council recommendation on a Pact for Research and Innovation in Europe (Pact for R&I), defines that the platform should inform on (i) the implementation of the ERA policy agenda at Union and national level; and on (ii) other relevant investments, reforms and activities supporting the principles and ERA priority areas set out in the Pact for R&I. The Commission and the Member States should share information through the ERA policy online platform on their current and planned policies and programmes that contribute to implementing the ERA policy agenda, and more broadly contribute to the principles and priorities set out by the Pact for R&I. In that sense, the online platform could serve as a kind of “hub” for sharing information around the new ERA and ease exchange between all actors.

Considering this, the online policy platform should be structured around the various elements that ensure the future monitoring of and reporting on the ERA implementation, including a scoreboard and dashboard and a tool for reporting from the Member States and the Commission on the implementation of the ERA policy agenda (e.g. annual reports to the Member States). Moreover, it should provide for easy access to and information on the priorities areas of the Pact for R&I, the ERA policy agenda, including its list of joint actions and their state of implementation, and on Member States. A clear structure should ensure compatibility and comparability of information per country and per action.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q3/Q4 2022

Indicative budget: EUR 1.20 million from the 2022 budget

15. EU Gender Equality Competence Facility

This EU Gender Equality Competence Facility will follow up on the pilot European knowledge and support facility for fostering institutional change through gender equality plans, and the GE Academy project, funded under the 2020 work programme of Horizon 2020, under the Science-with-and-for-society programme.

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In support to the requirement for public bodies, research organisations and higher education establishments applying to Horizon Europe to have a Gender Equality Plan (GEP) in place as an eligibility criterion, and the new ERA policy agenda, this facility will act as a competence centre and deploy support to public bodies, research organisations and universities on how to design, implement, evaluate, and sustain a gender equality plan.

This practical support will include the development of an enhanced digital, interactive platform to offer i) access to gender knowledge and expertise on gender equality plans, including to national-level contact points appointed through the pilot European knowledge and support facility for fostering institutional change through gender equality plans; ii) as well as trainers on gender equality in research and innovation certified through the GE Academy project.

This support will include providing guidance, information and assistance at institutional level, as well as disseminating the good practices and best tools in the field, adapted to specific country contexts and organisations' needs

The platform will include digital training modules and an extensive range of useful, applicable and appealing end-user material for the implementation of GEPs. It will take into account and build on the GEAR tool developed by the European Institute for Gender Equality (EIGE) and DG Research and Innovation. Activities should be implemented in close cooperation and complementarity with the EIGE.

Form of Funding: Procurement

Type of Action: Public procurement

Indicative timetable: Q2/Q3 2022

Indicative budget: EUR 1.00 million from the 2022 budget

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Several projects may work in parallel and contribute to several of the following expected outcomes:

- Creation of a common academic researchers' career structure, taking into account new developments and diversification of careers in academia, based on practices in Member States, linking it to the updated European Skills Competences and Occupations (ESCO) framework⁹⁰
- Enabling widespread recognition of the ESCO qualifications profile, more precisely the competences that PhD trainees and postdocs in various stages of their careers have obtained, both within and outside academia regardless of sector, discipline or location
- Mainstreaming of tenure track like systems, as an attempt to improve career development and solve part of the precarity of research careers in academia
- Mainstreaming practices for higher education institutions to involve non-academic sector from the onset in training & career development of PhD students
- Mainstreaming value creation and intersectoral mobility schemes within higher education institutions to promote jobs and growth.

Scope: The European Research and Innovation system needs to optimise its support for the constant flow-through of highly skilled talents to match the demand of society and the economy. Establishing an enhanced framework for researchers' careers within the EU towards a pipeline of highly skilled, creative, and resilient talents will accelerate the achievement of a knowledge-based society and economy.

The talent pipeline's main initiator remains the curiosity-driven approach to science, delivering creative and resilient individuals that can cope with change, for the benefit of society as a whole. The autonomy of organisations that are at the basis of the talent pipeline is an additional essential success factor for the ERA to provide visible value through excellence in research and innovation.

⁹⁰ <https://ec.europa.eu/esco/portal/home>

The framework aims at addressing: (i) the recognition of the research profession and PhD qualifications within and outside academia, the structuring of the researcher scientific career (i.e. to improve interoperability between academia and other employers), (ii) the diversification of the careers of talents trained as researcher, (iii) solutions to the precariousness of researchers' careers in academia including a model tenure-track system accompanied by possible standard principles, and (iv) strengthened interaction with business to facilitate access to the labour market.

The common framework for research careers is expected to be based on dynamic competence profiles of researchers in various stages of their diverse careers in order to enable widespread recognition of the competences that PhD trainees and postdocs have obtained, both within and outside academia independent of sector or discipline and geographical location. It should be translated in the new European competence framework⁹¹, which will need to be mainstreamed across Europe.

We expect projects to take measures to improve flow-through of talent within academia and to and from the non-academic sector or to other highly needed positions in academia, to (i) improve transferable skills training, involving non-academic actors in education and training of researchers from the onset, (ii) improve talent transfer to actors in the surrounding ecosystem, (iii) improve value creation practices among higher education institutions, (iv) communicate about the competences and qualifications of researchers and their talents to economic actors and society as a whole, (v) initiatives enabling the sustainable and dynamic interaction within and between the ecosystem actors for knowledge production, circulation and use, and stimulating career fluidity through inter-institutional and inter-sectoral mobility (bi-directionally), (vi) embed additional elements in the assessment schemes for both organisations and individuals at all career stages, (vii) propose methodologies on how to introduce skills requirements from the business, social and public sector to academia.

Activities should include the establishment of pilot (for instance) local talent management centres and training hubs that strengthen involvement of the non-academic sector in defining the priorities of researchers' training and lifelong learning upskilling. Attention should be paid to addressing gender equality related issues throughout the different strands of the proposed framework.

Duration: The action should be no longer than 2 years.

HORIZON-WIDERA-2022-ERA-01-51: Acceleration Services in support of the institutional transformation of Higher Education Institutions

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 2.50 and 3.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and

⁹¹ COM(2020)628, Commission Communication, A new ERA for Research and Innovation

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

	selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 10.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes in relation to acceleration services in support of the institutional transformation of higher education institutions (HEI):

- A methodology towards acceleration services that can help HEI or alliances/networks of HEIs in pursuing institutional transformations, including a monitoring mechanism to assess quality of the delivered services.
- A coaching service with best practice examples and guidance for individual HEIs as well as networks of HEIs, aligned with the common transformation agenda, facilitating access to finance from various sources.
- Tested acceleration services with user groups (HEI umbrella organisations, individual HEIs, or networks of HEIs, including partners from surrounding ecosystems), supporting HEI or networks of HEIs in developing a strategy to pursue institutional transformations in the field of R&I.
- An investment strategy mechanism, implemented with the user group, facilitating access to funding from national, regional, or EU resources to deliver on the Higher Education Transformation Agenda.
- Progress of the user groups of the acceleration services regarding the implementation of the chosen areas of the transformation agenda, measured through a monitoring mechanism.
- Policy feedback to the European Commission and Member States on the acceleration services, and widespread dissemination of the pilot results to other target groups

Scope: The overall aim of the Higher Education Institutions acceleration services is to help institutions to successfully implement a strategy and roadmap for transformation, by creating a shared knowledge base, coaching service and virtual meeting place for them to connect with peers and other ecosystem actors, as well as with investors and public funders. The acceleration services should consist of (i) a coaching and support mechanism for HEIs to pursue institutional transformation in various areas, (ii) a methodology for an investment strategy to facilitate access of higher education institutions and surrounding ecosystem to support to deliver on the chosen transformations, (iii) a monitoring mechanism to assess progress in the transformation efforts. Projects should address all three aspects and test them with user groups.

HEIs, including universities, are crucial drivers of knowledge ecosystems, and increasingly also of innovation ecosystems. The new ERA is expected to strengthen the R&I dimension of

HEIs through a comprehensive institutional Higher Education Transformation Agenda in synergy with the European Education Area, reinforcing their role as drivers of change, fostering their recovery, enabling shared objectives between the EU and Member States' initiatives to support higher education institutions in their efforts to transform on their education, research, innovation and service to society missions. To deliver on the transformation agenda for HEIs a large-scale concerted action in support of the institutional transformation efforts of HEIs will be required, including a standard methodology to develop roadmaps of EU, national and regional actions and investment measures for institutions or alliances.

Projects should build on the results of previous analyses that set out a framework for empowering HEIs across Europe in their research and innovation mission, facilitating ongoing transformation processes based on universities' needs (*"Towards a 2030 Vision on the Future of Universities in the field of research and innovation in Europe"*, October 2020⁹²), and the analyses performed under the previous Work Programme (in particular the study *"Knowledge ecosystems in the new ERA: a comprehensive analysis of the state of play, the design of monitoring mechanisms, and creation of a toolbox of support measures"*, 2021). The projects should link and build on the results of the initiative of the European Institute of Innovation and Technology (EIT) on Innovation Capacity Building for Higher Education launched in 2021 that has the objective to unlock the full innovation potential of higher education institutions (HEIs).

The Higher Education Transformation Agenda developed under the previous Work Programme is expected to include the most important priorities and challenges for HEIs regarding institutional transformations towards the future, including (trans)national cooperation with other HEIs, and the growing importance of engagement with a broad range of sectors and societal actors inherent to the multiple dimensions of HEI (education, research, innovation, service to society). Acceleration services should address all possible R&I areas of the Higher Education Transformation Agenda such as: (a) empower HEIs towards developing shared R&I strategies that deliver on Europe's challenges with critical mass; (b) facilitate the sharing of capacity, infrastructure and resources through collaborative settings, such as the European Universities initiative; (c) improve the attractiveness of researchers' careers, including through reform of the career assessment and incentives regimes; (d) facilitate co-operation with surrounding R&I ecosystem actors; (e) support the transition to knowledge- and digitally-driven HEIs that mainstream Open Science practices and include research and innovation outputs in teaching; (f) engage citizens in solving societal challenges; (g) support institutional change through inclusive gender equality plans.

Projects are expected to a methodology how to deploy such acceleration services including (i) access to coaches, mentors, expertise and training from academia or outside academia, with different profiles that match with the areas from the transformation agenda, which the project puts at the disposal of individual HEIs or networks of universities in need of institutional transformation in the field of R&I; these experts, coaches, mentors, etc should provide

⁹² <https://op.europa.eu/en/publication-detail/-/publication/a3cde934-12a0-11eb-9a54-01aa75ed71a1/language-en>

support for (ii) strategy development, (iii) roadmap development, and (iv) mapping of required support resources, as well as provide (v) detailed advice on access to funding from EU, national, and regional sources to allow the HEIs to deliver on the transformations; this should in particular include support and access to financial instruments for excellent research and innovation capacity, and support for disruptive innovation from academic sector, incl. spin-offs from universities and public research organisations, and cooperation agreements between academic and business sector. This should lead to a standard methodology to develop specific investment agendas for individual institutions or networks of HEI that consists of different funding and financial instrument branches, aligned with the priorities and areas of the common transformation agenda, and realising concerted support to the institutional transformation efforts universities want to engage in.

The acceleration services should be piloted together with large user groups (either individual HEI, networks or alliances of universities and surrounding ecosystem actors, or umbrella organisations of HEI), and progress of the users in the implementation of the chosen areas of the transformation agenda should be measured. Actions should therefore include an evaluation mechanism that enables to assess the strategies from individual HEIs or alliances of universities, pursuing institutional transformation towards universities of the future, for instance under supervision of an ‘acceleration board’ of independent experts. The evaluation mechanism should also monitor progress of the HEIs in the implementation of the chosen areas from the transformation agenda.

Projects should disseminate widely the methodology and the results of the pilot with user groups, as well as provide policy recommendations to the Commission and Member States on the acceleration services, in view of future targeted and synergetic actions in support of Higher Education sector.

The duration of the action should not exceed 5 years.

SCIENCE COMMUNICATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-60: A European competence centre for science communication

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidation of knowledge and development of guidelines, tools, innovative strategies, and recommendations to improve science communication for all research and innovation actors;
- Establishment of a European competence centre for science communication, sustained beyond the lifetime of funding;
- Increased networking and mutual learning, higher quality, more trustworthy, and more rapidly mobilised science communication by national authorities, businesses, civil society organisations, other stakeholders and projects.

Scope: Science communication is a scientific discipline, an activity conducted by career scientists and science outreach organisations, and a specific career pathway followed by journalists. It has the potential to improve science-society relations by increasing the transparency of science, building trust in the processes and outcomes of science, and raising scientific literacy. It can also improve the uptake of science by society and support evidence-based policy making.

Science and science communication have been undergoing radical changes over recent years, creating opportunities that may, in turn, pose new challenges. For instance, traditional media are increasingly being superseded by social media with more user-edited content; rapid diffusion of open access or pre-peer review papers gives the general public access to research that was previously locked behind paywalls; and open data enable a wider set of actors to interact with, analyse and interpret research results than in the past.

The covid-19 pandemic has highlighted the importance of communicating scientific knowledge and recommendations to respond to a fast-moving and critical threat. It is important to learn from this and other experiences when science communication has been essential to conveying scientific knowledge and recommendations on critical issues, to explaining how hypotheses, experiments and uncertainties are also part of the scientific method, to build capacities and strengthen networks, and to ensure greater ability in the future to react rapidly and effectively to critical situations.

This action has two parts, both of which must be addressed:

The first part consists of consolidating the evidence base on science communication from ongoing and past projects and initiatives⁹³, covering a wide range of existing and potential critical areas for research and innovation for society. Particular attention should be paid to contextual issues (geography, gender, age, socio-economic status, etc.) that affect the uptake or effectiveness of science communication. Policy reports and recommendations, guidelines, and innovative strategies should be developed for all research and innovation actor types; potential targets should include government agencies and public authorities, research funding and performing organisations, and civil society organisations. An important outcome should

⁹³ In particular, but not limited to, projects supported by Horizon 2020's SwafS-19-2018-2019-2020 topic, but other relevant projects and initiatives within and outside the Framework Programmes should also be considered.

be the publication of one or more user-friendly handbook(s) for effective science communication, backed by an interactive and pedagogical online toolkit, for use by Horizon Europe projects. This part should involve all parts of the quadruple helix⁹⁴ in co-creation activities, to ensure that the outcomes are usable in different contexts, for different purposes, and by different research and innovation actors; considerable efforts to disseminate the findings across the European Research Area should be undertaken.

The second part will consist of establishing a centre of knowledge, expertise, advice, resources, and tools on science communication in the European Research Area. It should link to - and support - existing communities of knowledge and practice, with the goal of improving co-ordination and mutual learning between them. It should support potential user groups including R&I projects, public authorities, government agencies, the private sector, and civil society organisations, to improve and initiate trusted and impactful science communication. An important element will be preparing the European Research Area to react quickly to situations requiring science communication, and the ability to provide rapid advice and support, as required. The centre should work towards the sustainability of its activities beyond the lifetime of funding, including through the provision of a basket of services and other activities that have market value; a business plan should therefore be elaborated from the very earliest stages of the project.

The action should build on the knowledge, networks and capacities developed by Horizon 2020⁹⁵ and by national and regional initiatives and work closely with relevant projects. A minimum project duration of 4 years should be envisaged.

SCIENCE EDUCATION

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-70: Open schooling for science education and a learning continuum for all

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 1.50 and 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 5.50 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

⁹⁴ A model of cooperation between industry, academia, civil society and public authorities, with a strong emphasis on citizens and their needs.

⁹⁵ Including topic SwafS-19-2018-2019-2020.

- Promote creation of new partnerships that foster networking, sharing and applying science and technology research findings amongst teachers, researchers and professionals across different enterprises;
- Engage learners in meaningful real-life problem-solving situations, within education, the workplace and other learning environments;
- Encourage science studies and science careers by supporting cross-community networks of stakeholders to address issues such as the Green Deal, Health and Digitalisation;
- Increase female participation in science studies and science careers and deconstruct gender stereotypes;
- Foster, share and apply science and innovation research to different genres of enterprises eg start-ups, SMEs, entrepreneurs;
- Encourage mentoring across the different groups involved in the partnerships in order to take full advantage of science, technology, research and innovation;
- Encourage industry-funded innovation to become part of lifelong learning programmes

Scope: Science education should be an essential component of compulsory education for all students. Policies should support students, teachers, parents and the wider community to improve access to and provide everyone with the opportunities to pursue excellence in learning and learning outcomes and to ensure young people and adult learners alike are motivated to learn and to be fully equipped to engage in scientific discourse and facilitate further study in science education.

The proposed action targets the creation of new partnerships in local communities to foster improved science education for all citizens and to contribute to a learning continuum for all. It seeks to promote partnerships between for example teachers, students, scientists, researchers, innovators, professionals in enterprise and other stakeholders in science related fields to work together on real-life challenges and innovations within local communities with a view to engaging them in teaching and learning processes and to promote science education as part of local community development.

This action aims to support a range of activities based on collaboration at local level between formal, non-formal and informal science education providers, enterprises and civil society in order to integrate the concept of open schooling, including all educational levels, in science education.

The action should consider current policy initiatives. Reference and consideration should be given to previously funded projects. Applicants should develop links with Scientix⁹⁶ and consider links with other policy domains such as projects funded under SwafS-26-2020 (Innovators of the future: bridging the gender gap).

⁹⁶ <https://cordis.europa.eu/project/id/730009>

Currently, Europe faces a shortfall in science-knowledgeable people at all levels of society at a time when it needs ever more scientists and a science literate society. The coronavirus pandemic demonstrates the importance and necessity of having highly qualified scientists, researchers, innovators and medics to keep our society safe and healthy. To increase the uptake of science careers to feed the talent pipeline, and to improve science literacy in our adult population and support a learning continuum for all, a collaborative action on Open Schooling is proposed.

GENDER EQUALITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-80: Living Lab for gender-responsive innovation

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Research and Innovation Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Advancement of knowledge and practice on gender-responsive innovation in Europe
- Strengthening of the innovation and inclusiveness dimensions of the European Research Area.

Scope: Women remain disproportionately under-represented among innovators and start-up entrepreneurs and hold less than 10% of patent applications⁹⁷, while the integration of the gender dimension into product design, technologies and innovations in general, remains very limited despite its potential for opening new markets and its core importance for solving global challenges and European priorities. Moreover, a positive correlation between the European Innovation Scoreboard and the Gender Equality Index has been reported, and a higher proportion of research organisations with a gender equality plan in a given country is similarly correlated with a higher Innovation Score⁹⁸.

A “Living Lab” will be put in place, gathering innovators as well as social science and gender scholars to investigate and generate new and disruptive ideas to promote women innovators and develop gender-responsive innovation. This novel knowledge and collaboration scheme

⁹⁷ She Figures 2018, DG Research and Innovation, European Commission: https://ec.europa.eu/info/publications/she-figures-2018_en

⁹⁸ <https://genderaction.eu/the-higher-a-country-scores-on-gender-equality-the-higher-its-innovation-potential/>

will build on projects and actions supported under Horizon 2020, including the EU Prize for Women Innovators and its network of awardees, project GENDERACTION, recommendations from the Horizon 2020 Expert Group to update and expand “Gendered Innovations/Innovation through Gender”⁹⁹ and outputs of projects funded under the SwafS-26-2020 (Innovators of the future: bridging the gender gap) topic. It will also complement initiatives led by the European Innovation Council, as well as EIT-led activities aimed at supporting women-led innovation.

Proposals are expected to address the following:

- Establish a sustainable learning and collaboration hub between various innovation ecosystem actors, including, e.g., women innovators, social innovators, education institutions, science and technology museums, foundations, start-ups and larger companies, as well as social science researchers and gender scholars from a variety of scientific disciplines.
- Develop real-life action research with above-mentioned stakeholders, based on the co-development and testing of user-centred and open and social innovation processes promoting gender equal participation, as well as integrating the gender dimension into their contents, with an opening to intersectional approaches considering social categories intersecting with gender such as ethnicity, disability, sexual orientation or else social origin. A special focus should be placed on information technology and AI-related fields and Commission priorities such as the European Green Deal and the preparedness and response to future pandemics.
- Propose concrete new methods and solutions for the development of gender-responsive innovation in Europe.

HORIZON-WIDERA-2022-ERA-01-81: Support to the implementation of inclusive gender equality plans

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of between EUR 0.50 and 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: The following additional eligibility criteria apply:

⁹⁹

https://ec.europa.eu/info/news/gendered-innovations-2-2020-nov-24_en

	The scheme must involve at least one leading university or research organisation in gender equality, and at least three less advanced institutions from Widening Member States or Associated Countries including countries from the Western Balkans
--	---

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhance the reputation, attractiveness, inclusiveness and research excellence of less advanced institutions as a result of implementing inclusive gender equality plans.
- Transform institutions to advance inclusive gender equality within the European Research Area (ERA).

Scope: The institutional change strategy implemented through gender equality plans has had very positive impacts in many research organisations and been a catalyser at national and EU level, as the latest ERA progress report has shown. However, there is a heterogeneity in the implementation of Gender Equality Plans across the EU, and persisting structural barriers in R&I institutions which must be addressed, through a renewed approach.

The inclusion scheme aims to strengthen and go beyond the minimum requirements for a Gender Equality Plan (GEP) as defined in Horizon Europe eligibility criteria, and to support the implementation of inclusive GEPs in line with the new ERA Communication and gender equality objectives¹⁰⁰.

Actions should clearly outline the approach for boosting gender equality strategies, including new areas such as intersectionality and diversity, outreach beyond the organisation, gender budgeting, or gender and innovation among others, building on knowledge and expertise developed through related Horizon 2020 projects and tools (e.g. GEAR Tool, ACT Communities of practice). Advanced organisations will mentor on best practices, processes, monitoring and actions to undertake in the inclusive GEPs.

Proposals are expected to address the following:

- Methods for exchanging and implementing good practices and materials, tailored to individual organisations' needs for the development of inclusive GEPs;
- Support for reinforcing their networking in the area of gender equality and inclusiveness, especially with already existing Communities of Practice;
- Activities such as on-site visits, on-site or virtual training; workshops; dissemination and outreach and capacity building activities.
- Implementation of specific actions in the less advanced institutions specifically addressing the opening to intersectionality and diversity, including in the integration of intersectional sex and gender analysis into R&I content.

¹⁰⁰

https://ec.europa.eu/info/research-and-innovation/strategy/era_fr

The partners involved in the twinning exercise are expected to revolve either around a specific thematic area or have widening partners with similar national/regional background for a better contextualization.

ETHICS AND INTEGRITY

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2022-ERA-01-91: The empirical and behavioural approach to research ethics and integrity

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 3.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action.
<i>Legal and financial set-up of the Grant Agreements</i>	The rules are described in General Annex G. The following exceptions apply: Beneficiaries will be subject to the following additional dissemination obligations: Proposals must include structured cooperation with the e-platform Embassy of Good Science¹⁰¹, and the European Networks ENERI (European Network of Research Ethics Committees and Research Integrity Offices)¹⁰² and ENRIO (European Network of Research Integrity Offices)¹⁰³. The output material of the action must be made available on the e-platform Embassy of Good Science. .

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

¹⁰¹ www.embassy.science

¹⁰² <http://eneri.eu/>

¹⁰³ <http://www.enrio.eu/>

Trust in science is key for an inclusive, open and democratic society.¹⁰⁴ To sustain that trust, it is pivotal all research is conducted in line with the highest standards on research ethics and integrity. Research misconduct, in any stage of the research process, can undermine public trust in research and may amount to severe socio-economic consequences.

Several factors may lead researchers to breach research ethics and integrity standards and engage in questionable research practices. While some of these factors are systemic and institutional, individual factors may contribute to researchers' behaviour within the institutional environments in which they operate. While researchers mostly act with integrity, they sometimes (and often unintentionally) end up engaging in questionable practices that could lead to transgressions, engulfing research teams, departments, institutions and on rare occasions, even national research systems. In order to develop a comprehensive preventive policy and support research organizations and research funders to uphold the highest standards of research ethics and integrity, there is a need to explore in depth the behavioural and organizational factors that may facilitate researchers engaging in questionable practices and misconduct and develop methodologies to address those factors.

This action aims to improve the understanding of researchers' behaviours and incorporate this knowledge in measures aiming at enhancing promotion of ethics and integrity principles through shared responsibility (individual and institutional), improved education and training processes and qualified mentoring and support. Guaranteeing a generalised and consistently high level of research ethics and integrity, could drastically improve the relevance, robustness, accessibility and dissemination of research results and enhance societal trust in the scientific process.

Scope: In order to elucidate behavioural factors that may lead researchers to breach standards of research ethics and integrity, this action should perform a literature review, map the existing knowledge on behavioural ethics and moral psychology and identify research outcomes and research needs.

Based on the results of the literature review the action should develop a casuistry-based methodology to address research misconduct. This methodology should also take into account personal and institutional responsibilities for the promotion of research integrity and relevant research and efforts on the rehabilitation and reintegration of researchers. Particular attention should be paid to issues related to the mental health and wellbeing of researchers, especially for those employed in uncertain work conditions (short-term contracts, early career researchers, students, etc.), including with respect to bullying and sexual harassment as well as other forms of gender-based violence.

Based on the results of the literature review, the action should conduct a public consultation process with all involved stakeholders and ensuring adequate representation of young students and early career researchers. The literature review and the consultation process should also incorporate real life experiences from researchers, members of ethics and misconduct

¹⁰⁴ Bonn Declaration on Freedom of Scientific Research, adopted at the Ministerial Conference on the European Research Area on 20 October 2020 in Bonn, https://www.bmbf.de/files/10_2_2_Bonn_Declaration_en_final.pdf.

committees, Integrity and Ethics officers (and the local and national level). Participation of the private sector is strongly encouraged, especially as behavioural studies on ethical conduct in industry have been widely published and discussed.

Publicly available results from relevant EU funded research projects¹⁰⁵ (e.g. SOP4RI, Integrity, PRO-Ethics, TRUST, PRO-RES, Path2Integrity) should be taken into account. Structured cooperation with the e-platform Embassy of Good Science¹⁰⁶ and the European Network ENRIO, is necessary.

In order to achieve the expected outcomes, international cooperation is strongly advised, in particular with countries which have concluded an international agreement on science and technology with the European Union. Participants from countries, which are not eligible for funding according to the General Annexes, may take part in the project as associated partners.

The action should develop:

- i. An identification of current needs in improving institutional research culture, taking into account the potential unequal impacts on people of different genders;
- ii. Specific course material to enhance and supplement current efforts on research ethics and integrity that stem from (but not limited to) EU-funded projects (see <https://www.embassy.science/>);
- iii. Guidelines to facilitate adoption of the gained knowledge in host institutions - as a supplement to existing Standard Operating procedures (see SOP4RI, <https://www.sops4ri.eu/>). These guidelines should also cover responsible mentoring, supervision and role modelling;
- iv. Methodologies for measuring the short-, medium- and long-term impact of ethics and integrity trainings in the attitudes and behaviours of students and researchers and their ethical conduct in research and innovation; and
- v. A best practice manual, based on case studies of implemented measures that analyse what works and what does not work in various contexts, to enable practice-oriented learning.

All outputs of the action must be available on the e-platform Embassy of Good Science web site (<https://www.embassy.science/>)

¹⁰⁵ Detailed information of the mentioned EU funded projects can be found on CORDIS web site (<https://cordis.europa.eu/>)

¹⁰⁶ www.embassy.science

OTHER ACTIONS NOT SUBJECT TO CALLS FOR PROPOSALS

GRANT TO IDENTIFIED BENEFICIARIES

1. Support the Slovenian Presidency for the organization of an ERA Conference

As part of the implementation of the renewed ERA, the Slovenian Presidency will organise a major ERA conference in the second half of 2021. This high-level conference will engage in major political debates related to ERA as well as its future governance. This grant will support the government of Slovenia, and more concretely the Ministry of Education, Science and Sport, in organizing this conference.

Legal entities:

Government of Slovenia, Ministry of Education, Science and Sport, Masarykova 16, 1000 Ljubljana, Slovenia

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 / 2021

Indicative budget: EUR 0.10 million from the 2021 budget

2. Support to RESAVER Pension Fund

RESAVER Pension Fund is the first multi-country, multi-employers pension fund that enables mobile employees of the research institutions to remain affiliated to the same supplementary pension fund (2nd pillar and 3rd pillar) when moving between different countries and changing jobs.

The pension fund is based on the IORP II directive ((2016/2341/EC) Institutions for Occupational Retirement Provision) which provides a framework for institutions providing occupational pensions in all EU countries. The pension fund complies with national social and labour law and does not interfere with Member States prerogative in the area of 1st pillar pension.

The purpose of the grant is to provide financial support towards the functioning of the RESAVER pension fund in its core activities - over a period of three years - in order to carry out a set of activities detailed in a work programme.

The beneficiary may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Legal entities:

'RESAVER Pension Fund OFF' (Retirement Savings Vehicle for European Research Institutions), 22, Rue de Pascale, 1040 Brussels. Belgium

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4 2021

Indicative budget: EUR 0.85 million from the 2021 budget

3. ERA Talent Platform

The new ERA Communication outlines that EURAXESS services, network and portals will be broadened into an ERA Talent Platform, an online one-stop-shop, with improved structure and governance, exploiting links to Europass, the EU platform for people to manage their learning and careers and the EURES network of European public employment services. The Council Conclusions on the Future of the ERA calls on the Commission and Member States to develop EURAXESS as the ERA pilot action to foster “inclusiveness” within the ERA into an ERA Talent Platform fit to address existing barriers to unbalanced mobility patterns by supporting researchers in their career development within the ERA, connecting researchers and institutions, and improving employability and talent absorption and mobility schemes.

The scope of the action is to further intensify the services provided by the EURAXESS network, by reforming its structure and expanding its mandate towards taking care of the career development of researchers in Europe, with particular focus on talented researchers and opening new career trajectories for them in academia, industry and business. This is expected to happen through the set-up of dedicated physical and/or virtual centres/hubs affiliated to the existing network, acting as one-stop-shops based on multidisciplinary teams and cross-country and cross-border coordinated structures on a common agenda and standards of work, processes and tools for talent management services.

The support for the career development of talented researchers needs to take into account different layers of specialization, such as a basic career orientation service or more advanced services, consisting in personalized assistance, such as organization of trainings and providing access to career advisor, mentoring and coaching sessions. The advanced services need to be

empowered with competences drawn from or accessed through EURAXESS centres' partnerships with multiplier and enabler organizations.

The centres to be specialised in talent management services should also assist institutions and have within their portfolio the organization of networking activities to connect researchers with employers and the local/regional R&I community. Additional services for institutions should include, among others, the creation of communities of practice on the sub-processes of talent management (recruitment, selection, integration in the culture of the host country, rewards and skills, recognition and motivation of high-potential researchers, etc.). Such centres should facilitate best practice sharing and are expected to keep their R&I communities informed and engaged on new ERA policy measures in the respective areas.

The support for talented researchers should be complemented by enhanced services for the social-cultural and labour integration of researchers and their families in the host country.

The reform and expansion of the services need to be reflected on the EURAXESS portal and national portals, which should develop into a Talent Platform addressing both researchers and institutions, including newly designed sections, tools and training materials making EURAXESS a recruitment, career development and social networking website, designed for research professionals. A specific focus should be placed on fostering gender equality in talent recognition, including through targeted support for women researchers, and also addressing mobility-related dual career and work-life balance issues.

The support to third parties can only be provided in the form of grants. The maximum amount to be granted to each third party is EUR 60.000.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q3 / 2022

Indicative budget: EUR 4.00 million from the 2022 budget

4. The EuroScience Open Forum (ESOF) and European City of Science 2022 actions

Expected Outcomes:

- Bring together more than 5000 delegates from more than 50 countries within and outside Europe;
- Showcase latest developments in research and innovation and offer open forum for lively discussion and debate on the future of European science, policy and innovation;
- Encompass three interconnected programmes: scientific research and innovation, science-to-business and scientific careers;
- Parallel Science in the City festival targets local citizens to extend and enhance dialog and exchange on science and its role in society.

Scope:

Horizon Europe - Work Programme 2021-2022
Widening participation and strengthening the European Research Area

In addition to the ESOF conference, Leiden, the host city of ESOF 2022, includes two new initiatives:

- A festival: “European Science in the City” to be organised in close collaboration with the European Commission. The goal of the new event, associated with the more general “Science in the City” festival of ESOF, will be to showcase for the general public and European citizens the results of R&I projects supported by the European Commission, including the Horizon Europe programme. The “European Science in the City” festival will be promoted together with the ESOF conference.
- A year of events: the European City of Science (ECS) - a true all-year programme with various events and activities programmed by the host city in the spirit of the European Capital of Culture or the European Green Capital. In this perspective, the yearlong programme of the European City of Science will target a wide population of European citizens beyond simple local or regional impact.

Support offered to the organisers of ESOF2022 and its associated events, notably the European City of Science (ECS) to ensure that a structured and expanded dialogue among all societal actors (researchers, citizens, policy makers, business and third sector organisations, including all social groups) will be developed. In this context, special emphasis is placed on exploring and supporting citizen science as an important dimension of open science and as a way to promote further Responsible Research and Innovation through outreach activities, science education and various forms of public engagement with science.

An inclusive and integrated combination of seminars, workshops, debates and round table discussions using new interactive and engaging formats is included and centred on Horizon Europe key societal challenges.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q4/2021

Indicative budget: EUR 2.00 million from the 2021 budget

5. European Union Contest for Young Scientists (EUCYS) 2022

The European Union Contest for Young Scientists is a science competition for 14 to 20 year olds. It brings together first prize winners of national science contests for pre-Higher Education Institution school science projects to compete for prizes and awards. The contestants are judged by a jury of eminent scientists selected by the European Commission. The jury award 1st, 2nd and 3rd monetary prizes as well as other prestigious prizes donated to the contest by international research organisations and other similar bodies. The EU Contest takes place each year in a different location. This Contest provides additional stimulus to young people who have already demonstrated that they are applying science to solve problems. Many go on to become successful scientists. It attracts a considerable level of co-funding in the host country, and high levels of international media attention. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The proposal could also consider a pilot scheme for other constituents such as early career researchers. The organisation of the contest is based on the General Guidelines on the organisation of the European Union Contest for Young Scientists and its Annex 1 – Rules of the contest. These are updated annually by the European Commission. https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/eucys_en.

Beneficiaries may provide financial support to third parties. The support to third parties can only be provided in the form of grants or prizes. The maximum amount to be granted to each third party is EUR 60 000.

Indicative timetable: Q4 2021

Indicative budget: EUR 2.00 million from the 2021 budget

6. Science Advice for Policy by European Academies

Expected impact:

- Enhanced capacity for sound evidence-informed policy-making by providing reliable, state-of-the art, policy-relevant and publicly accessible scientific evidence available to the Group in a timely, efficient and transparent manner;
- A demonstrably more open and inclusive dialogue about major societal challenges via a transparently managed, interdisciplinary approach and a wide engagement of the scientific community;
- Increased societal awareness of the role of science advice-to-policy- and to decision-making, by developing capabilities to accurately communicate science advice, including the degree of uncertainty of specific scientific knowledge;
- Improved transparency of the EU policy-making process, including through the possibility of active engagement with the wider public and involvement of the entire scientific community

Scope: Better Regulation is a priority for the European Commission ('the EC') and so is the use of scientific evidence to inform policy-making. Scientific advice is necessary and it must be excellent, independent, timely, relevant to European Union (EU) policy-making and as interdisciplinary as required to address all dimensions of the policy issue at stake.

In this regard, the Science Advice for Policy by European Academies ('the SAPEA') Consortium has a proven record of working in partnership mode to provide scientific evidence to the European Commission's Group of Chief Scientific Advisors ('the Group'), within the framework of the Commission's Scientific Advice Mechanism ('SAM'). SAM consists of the Group, the external scientific evidence provider SAPEA and a dedicated secretariat established in DG RTD. As evidence-informed policy is among the priorities of the 2019-2024 European Commission One of the priorities for this College: https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf

Building on its experience, the SAPEA consortium will:

- Provide at the request of the Commission targeted scientific evidence in a timely and transparent manner to inform the production of science advice by the Group of Chief Scientific Advisors. The evidence should be of the highest scientific quality, developed by complete and independent evidence analysis and synthesis respecting timelines and policy needs;
- Strengthen the links between European science academies and ensure active participation of all academies that are associated in the networks that make up the Consortium, and include experts from other organisations. In carrying out this process, the Consortium will ensure optimal geographical and gender diversity, coverage of all relevant science fields, and interdisciplinary. An open and inclusive approach will be used involving experts who are not Academy Fellows, both early career and senior of various, relevant backgrounds. These approaches aim at increasing the range of the

available scientific evidence to be considered and the excellence of the expertise provided;

- To consider for the Evidence Review Report scientific evidence published in peer reviewed scientific journals, edited volumes, and monographs submitted by independent experts in the area under consideration. Scientific evidence submitted by other interested entities should only be considered, if relevant and meeting high quality and if these entities provide proof that they are registered in the EU Transparency Register..
- Develop novel and improve existing forms of scientific input to address short-term needs of the Group in a timely, reliable, policy-relevant and efficient manner, e.g. fast evidence-gathering tools and literature reviews, short term evidence reports, and expert consultation on high-priority, short-term policy initiatives.
- Develop further SAPEA's internal database to access an up-to-date pool of top-quality experts in various fields, in combination with other networking approaches that can be called upon at short notice.
- In coordination with the secretariat supporting the Group of Chief Scientific Advisors, engage with citizens, stakeholders, scientific communities and policy-makers to disseminate and promote the work of the Group, and to monitor, assess and report on the impact and uptake thereof;
- Increase awareness of the significance of science-to-policy advice and ensure outreach to larger audiences, including in the Member States, through targeted communication actions, novel information products, media outreach, and policy monitoring processes, whilst ensuring consistent internal and external communication;
- Include an 'early alert' mechanism to signal topics and challenges that may become relevant for the Group of Chief Scientific Advisors and the Commission, identified through techniques such as horizon scanning and consultation including through through the academy networks.
- Formulate in the Evidence Review Report (ERR) clear options and conclusions (not policy recommendations) in response to the given policy question.

The project duration is up to 3 years.

Indicative timetable: Q2 2022

Indicative budget: EUR 2.20 million from the 2021 budget and EUR 2.20 million from the 2022 budget

7. Presidency event - Conference on international cooperation in research and innovation

Expected Outcome: the project is expected to organise an international conference which will contribute to all of the following outcomes, based on the elements listed below, as a key step in the implementation of the Global Approach to Research and Innovation, as set out in the Commission Communication of 18 May 2021 and the Council Conclusions of 28 September 2021:

- Create a shared European dynamic to strengthen international R&I partnerships, while promoting reciprocity and shared values and principles;
- Strengthen concertation between Member States and with the Commission on their approaches and actions to support international cooperation, guiding the international elements of both Horizon Europe and of Member States' own programmes, in particular by focusing joint efforts on global challenges and strengthening the role of multilateral alliances in these areas;
- Launch a multilateral dialogue with international partners on the implementation of the EU's Global Approach to research and innovation to identify a pathway to achieve a

level playing field in terms of values, principles, reciprocity and framework conditions, notably through establishing a more permanent dialogue around these issues;

- Increase the visibility of research innovation and higher education actions in the framework of external action.

Expected Impact: the proposal should set out a credible pathway to contributing to the following impact of the Horizon Europe Strategic Plan:

- Achieve a critical mass of global research efforts focused on common challenges facilitated by common approaches to research and innovation.

Scope: To meet these objectives, the conference programme is proposed as follows:

First block: Exchanges between Member States and with the Commission in the form of a meeting of European Ministers for Research and Innovation on “What are the stakes for international cooperation in R&I in a changing world” (What coordination mechanisms? What strategies are needed with the rest of the world?):

- Target audience: EU Member State Ministers for Research and Innovation, European Commissioner for Innovation, Research, Culture, Education and Youth.

Second block: Launch of a multilateral dialogue with international partners on the theme of “a new research and innovation partnership based on shared values and principles. The discussion will also bring in the perspective of higher education:

- Target audience: EU Member State Ministers, European Commissioner for Innovation, Research, Culture, Education and Youth; Ministers/Ambassadors of countries having concluded Science and Technology Agreements with the EU, Associated Countries; international organisations such as the OECD and UNESCO.

Legal entities:

Institut de recherche pour le développement (IRD), 44 boulevard de Dunkerque, CS 90009, 13572 Marseille Cedex 02, France

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: Q1 /2022

Indicative budget: EUR 0.40 million from the 2021 budget

8. NCP Network including proposal pre-check

Research and innovation performance is correlated with the efficiency of the national research and innovation system and the capacity and the effectiveness of the National Contact Points (NCPs). Special attention should be given to less experienced entities in low R&I performing countries to bridge the knowledge gap and enable better access to funding opportunities in the EU Framework Programmes and beyond.

A dedicated support mechanism under this Work programme part with specific objective to strengthen the activities of NCPs to support international networking and to improve the quality of proposals from legal entities from low R&I performing countries is envisaged.

Proposals should aim to facilitate trans-national co-operation between NCPs with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking into account the diversity of actors that make up the constituencies of both the Widening and ERA parts. They also should show that the activities put forward will deliver tangible benefits to potential applicants.

Activities should capitalise on relevant work of the previous NCP network project in this sector. To help close the innovation divide, a substantial component of the proposed activities must be devoted to activities aimed at helping NCPs in those countries that have been participating at low levels in the FP programmes up to now. These activities should help these NCPs rapidly acquire the know-how on NCP operations accumulated in other countries including, for example, training, mentoring, and twinning. They may also include awareness raising actions aimed at increasing visibility of well-qualified potential applicant organisations in the Widening countries.

Support will be given to a consortium of identified NCPs in the area of the ‘Widening Participation and strengthening the European Research Area’ part coordinated by an organisation with a proven track record in managing an network of NCPs in the Widening domain. The members of the core consortium are identified in this call. Additional NCP organisations especially from Associated Countries may participate as linked third parties.

The implementation will include following actions: info days, training and workshops; tailored consultations and advice; support to matchmaking platform; proposal pre-screening (checks on eligibility and viability of concept) and actions dedicated to networking and matchmaking activities capitalising on the experience of the former NCP WIDENET project. For matchmaking activities the consortium will closely collaborate with NCP networks working on other parts of Horizon Europe notably pillar 2. A mutual learning process among NCPs will help building capacity by helping less experienced NCPs to enhance their competence (training, workshops). For these activities beneficiaries may provide financial support to third parties in the form of grants.

The implementation will be carried out in work packages distinguished for the two programme part components (Widening and ERA). The Widening part will especially take into account the requirements of the Advancing Europe package.

For the proposal pre-check part it ranges from seminar style training for proposal writing for larger groups to written advice on individual proposals (e.g. on clarity of objectives, consistency with work programme, balanced budget etc.) but not on scientific content and coaching of individuals. The action may include advice for applications outside the widening programme to a limited extent and based on strategic choices such as areas under Pillar 2, where application success rate from Widening countries were below average in comparable fields of Horizon 2020. As far as the matchmaking is concerned, possible synergies with existing platforms, e.g. Funding & Tenders Portal and EURAXESS should be explored, as well as dedicated events for brokerage and partner search in a physical or virtual mode.

Special attention should be given to enhancing the competence of NCPs, including helping less experienced NCPs rapidly acquire the know-how built up in other countries. The consortium should have a good representation of experienced and less experienced NCPs.

Indicative budget: EUR 8.00 million from the 2021 budget

9. Framework Partnership Agreement with COST (European Co-operation in Science and Technology)

COST (European Co-operation in Science and Technology) is an EU funded pan European programme that enables researchers to set up their interdisciplinary research networks in Europe and beyond. The programme was established in 1971 in an intergovernmental mode. It will be implemented by a member state owned organisation i.e. the COST Association under a Framework Partnership Agreement (FPA). This FPA will outline an action plan for the full duration of Horizon Europe until 2027 describing the strategic objectives and key milestones for the implementation of COST. This FPA is based on Article 195 of the Financial Regulation that allows the use of a named beneficiary for activities with specific characteristics that require a particular type of body on account of its technical competence, its high degree of specialisation or its administrative powers, on condition that the activities concerned do not fall within the scope of a call for proposals.

While the networks are open to international partners from outside Europe, COST provides a unique low entry mechanism for researchers from countries catching up in the R&I in the EU and from its Eastern and Southern neighbours while remaining open for researchers from all European countries and international partners. For many researchers (especially at the beginning of their career) from widening countries, the participation in COST networking actions is the sole opportunity for getting in touch with European and international research initiatives and to benefitting from exposure to leading scientists in their field. The approach of COST is not funding research itself but pooling resources and research results by networking and hence upscaling.

The specific objectives of this support mechanism are to:

- Increase participation of widening countries (inclusiveness target countries (ITC) according to COST internal terminology) in European research activities and higher success rates;
- Contribute towards improving the R&I culture of the widening country (indicators such as research intensity, innovation performance, values towards R&I);
- Improve scientific capabilities of widening countries to increase their chances in participating and successfully obtaining competitive funding from the EU and other international sources;
- Trigger scientific breakthroughs and new research strands by pooling interdisciplinary resources across Europe;

- Boost the career of young and female researchers by networking and brain circulation in line with ERA principles and the development of leadership skills;
- Strengthen the research management capacities and administrative skills of participating researchers;
- Develop operational synergies with other widening actions and create links to thematic parts of Horizon Europe, notably Pillar 2.

COST Association , Avenue du Boulevard - Bolwerklaan 21, 1210 Brussels

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

10. Implementation of COST actions - Specific Grant under Framework Partnership Agreement

The EC funds almost the entire programme under a Framework Partnership Agreement (FPAs) with underlying Specific Grant Agreements (SGAs). In the FPA and the SGAs the beneficiary COST Association commits to a mandatory conditionality to spend at least 50% of the budget at the benefit of researchers from countries eligible from the Widening countries and to run 80% of the activities with a significant widening dimension. The primary purpose of this grant is the implementation of the COST networking actions. Other services may be implemented as far as complementary and appropriate. The personnel costs operations incurred by the COST Association as the implementing structure are eligible as direct cost up to a maximum of 20 million Euro as far as they are necessary for the implementation of the COST networking actions and related other support activities. For the same purpose cost for other goods and services and subcontracting are eligible up to a maximum of 2 million Euro. COST networking actions will be implemented by third party grant holders using financial support to third parties.

The beneficiary may provide financial support to third parties in the form of grants. The maximum amount to be granted to each third party must be necessary to meet the objectives of the SGA and will be fixed in the grant agreement in line with the COST Vademecum. It will be used for the implementation of networking tools defined in a closed list that is fixed in the description of the action.

The COST Association will organise competitive open calls and an independent evaluation and selection procedure according to its own rules in agreement with the European Commission. At proposal stage at least 50% of the participants must be located in widening countries.

Form of Funding: Grants not subject to calls for proposals

Type of Action: Grant to identified beneficiary according to Financial Regulation Article 195(e) - Coordination and support action

The general conditions, including admissibility conditions, eligibility conditions, award criteria, evaluation and award procedure, legal and financial set-up for grants, financial and operational capacity and exclusion, and procedure are provided in parts A to G of the General Annexes.

Indicative timetable: CSA for 3 years

Indicative budget: EUR 153.00 million from the 2021 budget

11. Presidency conferences with a European regional dimension - WIRE

A two-day conference (WIRE) will be organised under the EU French Presidency (Presidency Conference) in 2022. The event will gather actors active in the innovation and education ecosystem with the aim of improving science-based competitiveness.

The conference will debate knowledge based regional development and will offer potential solutions of streamlining resources aimed for this. Representatives of education organizations, research organizations, start-ups, clusters, policy makers and other related interested parties will exchange views and best practices that could lead to a higher impact of innovation across users and society at large. Best practices, trends and visions will be considered.
