

Co-funding to R&I partnerships of European relevance is under Horizon Europe limited to European Partnerships identified in the Strategic Plan for Horizon Europe.

The ERA part of Horizon Europe complements this new strategic approach by providing the possibility for Member States, Associated Countries and civil society organisations such as foundations, to maintain existing and establish new collaborations on priorities of their choice, thereby continuing the spirit of the successful ERA-NET scheme, and extending it also to the domain of EU missions.

Successful proposals should align national and regional research funding programmes on agreed priorities that are common to the countries participating in the action and, where appropriate, implement joint calls for transnational R&I projects as well as other joint calls or other joint activities. Applicants should demonstrate clear commitments from participating programmes to pool resources and ensure complementarity between activities and policies with those of the Framework Programme and relevant European Partnerships and EU missions.

Proposals should pool the necessary resources from the participating national (or regional) research programmes as well as, where appropriate, leverage resources from pertinent foundations, charities and transnational initiatives, with a view to implementing calls for proposals, either within the context of this action or in possible follow-up actions, resulting in grants to third parties without EU co-funding in this area.

The proposals should also demonstrate potential impact at national, regional and transnational level. The proposals should demonstrate that activities exclude overlaps with on-going actions co-funded by the EU under Horizon 2020 or Horizon Europe.

The actions should envisage a duration appropriate to the ambition and complexity of the proposed topic.

**HORIZON-WIDERA-2023-ERA-01-02: A strong European R&I Foresight Community to better inform R&I policy decisions in the European Research Area about potential futures**

| <b>Specific conditions</b>                  |                                                                                                                                                                                                                                                |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Expected EU contribution per project</i> | The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts. |
| <i>Indicative budget</i>                    | The total indicative budget for the topic is EUR 2.00 million.                                                                                                                                                                                 |
| <i>Type of Action</i>                       | Coordination and Support Actions                                                                                                                                                                                                               |
| <i>Eligibility conditions</i>               | The conditions are described in General Annex B. The following exceptions apply:                                                                                                                                                               |

|  |                                                                                                   |
|--|---------------------------------------------------------------------------------------------------|
|  | The Joint Research Centre (JRC) may participate as member of the consortium selected for funding. |
|--|---------------------------------------------------------------------------------------------------|

Expected Outcome: The project is expected to contribute to all of the following expected outcomes:

- Strengthening the European R&I foresight community, its networks, resources and functions, and its engagement with citizens. Improve the use of foresight in R&I policy and planning across the European Research Area to support prioritisation, coordination and direction of R&I investments and reforms, which will support the implementation. Common visions and pathways to the future(s), and “accounting” of Member States R&I foresight activities contribute to the monitoring of the ERA;
- Building and mobilising joint resources to inform R&I policies at EU and national levels, including through the European Framework Programme for Research and Innovation (Strategic Plan and Work Programmes), such as collection of manuals and guidebooks, a library of futures, expert pools, digital tool-boxes or shared software solutions to support horizon scanning, citizen engagement projects, scenario building, and science and technology road mapping;
- Joining forces on pilot activities and projects on topics of common interest, supporting and “training” the networking within the R&I foresight community including governmental R&I foresight organisations, which already organised regular workshops meetings under several Council Presidencies.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Common visions and shared appreciations of future challenges and opportunities amongst R&I policy-makers in the European Research Area;
- Improved capacity of Member States within the European Research Area to anticipate the future and tackle new challenges, and to take advantage of new opportunity spaces, identifying trajectories for R&I interventions at EU and national level, combining knowledge, data, expert advice and citizen engagement;
- Improved engagement of researchers, communicators, journalists, industry, policy-makers and civil society, with foresight in general and foresight for R&I in particular, improving the contributions of science and research to policy across the board for improved preparedness for future disruptive events;
- Stronger engagement of society in R&I policy as a consequence of citizen discourses on future implications of S&T&I, improved coherence and overall effectiveness of research and innovation interventions across Europe through better anticipation of futures, and thus improved impact on the economy and on policy priorities at EU and national levels;

- More and better contributions of R&I to societal ideals and political and economic objectives across Europe, namely the twin green and digital transition, and increasing public engagement and participation in the ERA as well as resilience of the EU.

Scope: Foresight has become an important element of policymaking across the European Union and much of the world. It is increasingly recognised for its potential to help anticipation and preparedness to deal with challenges and capture opportunities of the future.

Foresight is an important and proven means to engage with citizens on issues of science, technology and innovation and their possible contribution to tackle societal challenges. It supports the needed just, sustainable and digital transitions, and the move towards the future we want.

R&I policy has been amongst the first to support and use foresight in Europe, at both national and European levels. The longstanding experience provides a strong foundation for a European R&I foresight community. However, the extent of use of foresight in R&I policy across Europe is still uneven, as well as its degree of institutionalisation.

Foresight today is a common tool in strategy development and programming in science and technology and in policy making in a broader sense. It complements and incorporates much of the classical R&I policy toolbox of technology assessment, trend analysis, forecasting, road mapping, evaluation, strategic or SWOT analyses etc. The unevenness of the use of foresight affects the potential of foresight to support national and European R&I policies in the European Research Area.

The objective of this action is to accelerate the development of a European R&I foresight community supporting the development of national R&I foresight communities that are well integrated in national policy systems; and can contribute not only to the design of national reforms and policies but also to the evidence underpinning and the governance of a vibrant European Research Area, which delivers on common priorities and objectives.

The diversity of experiences with foresight can be a resource for a European foresight community, underscoring the need and being a foundation for highly beneficial networking actions, to exchange experiences, share ideas and work on topics of common interest. Such topics should have a clear link to ERA agenda points. Previous discussions with Member States suggest for instance the workforce skill and capacity needs for the twin transition. The consortium to carry out the CSA tasks should reflect the diversity of R&I foresight settings across Europe and involve government R&I foresight agencies and institutions from across the EU including countries associated with Horizon Europe.

This action should include:

- A stocktaking of the organisation of foresight activities informing R&I policy in the European Research Area, covering institutional, methodological, and analytical practices as well as an assessment of the main strengths and weaknesses nationally and in relation to policy needs at European level;
