

management of IPR over research results is necessary for such cooperative work and systematic sharing to happen. However, a lack of awareness and understanding of IPR -in particular given the complexity of the relevant legal and regulatory landscape- sometimes leads to mismanagement of IP and the consequent difficulty of researchers and institutions to determine how their research is disseminated.

Copyright is an area of particular importance for open science within the field of IP, since the bundle of rights that authors have on their original works (e.g., scientific publications or databases) allow them to set the conditions for their dissemination and re-use.

Greater awareness of their rights and how they can be exercised would help authors to make more informed choices and get them in control about the further usage of their research results. They will also align themselves better with open science practices and comply with funder open access mandates.

Adequate IP management is therefore an important enabler of open science. Against this context, there is the need to improve knowledge among researchers and their institutions of concepts such as copyright, licences and patents, leading to an understanding of the options at their disposal for, amongst other, archiving, posting, distributing and eventually publishing their scholarship in ways that enable open science in their own terms. There is also a need to improve the understanding of the relationship between open science and IP, in particular how the adequate management of IP lies at the very core of open science. This calls for supporting education and training in IP management that enables open science and for building capacity in research organisations and their staff, with the objective to support and equip researchers at all stages of their career with the knowledge they need in this area.

In contributing to the above-mentioned outputs, projects are expected to take into account the existing IP service delivery landscape and the existing training and capacity building efforts and materials offered by European Commission service contracts (i.e., IP Helpdesk¹¹⁴, IP Scan¹¹⁵, IP Booster¹¹⁶) and the work of EUIPO on copyright and trademarks and EPO's work on patents. The projects are also expected to build on the European Commission code of practice for the smart use of IP (expected to be delivered in 2022) and further strengthen the relationship with open science.

Duration: The action should be no longer than 24 months.

HORIZON-WIDERA-2024-ERA-01-08: Global cooperation in not-for-profit open access publishing

Specific conditions	
<i>Expected EU contribution per</i>	The Commission estimates that an EU contribution of around EUR 2.50 million would allow these outcomes to be addressed appropriately.

Horizon Europe - Work Programme 2023-2025
Widening participation and strengthening the European Research Area

<i>project</i>	Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.50 million.
<i>Type of Action</i>	Coordination and Support Actions
<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action. Due to the scope of this topic, legal entities established in non-associated third countries are exceptionally eligible for Union funding.

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Enhanced understanding of the different non-for-profit open access publishing solutions, their business models and sustainability;
- Coordination amongst institutional not-for-profit open access publishing services between Europe and other areas in the world at the non-technological level leading to high-quality publishing services and publishing venues at the global scale that are trusted by researchers;
- Enhance the uptake of elements of open science by open access publishing services in Europe and other areas of the world (e.g., open peer review, early sharing of research, post-publication peer review models etc.);
- Fit for purpose training materials and trainings for service providers and scientific journal editors in different disciplines enabling the improvement of the quality of publishing services and of the scientific quality of publishing venues along internationally accepted standards.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Increased equity, diversity and inclusivity of open science practices, and in particular open access publishing on a not-for-profit basis, in the European Union and in the world;
- Structured mechanisms for knowledge transfer between relevant not-for-profit open access publishing services in the European Union and other areas of the world.

Scope: A significant increase in open access publishing activities based on not-for-profit business models can be observed in Europe and across the world, which in principle do not charge authors for publishing. They are the result of technological advancements leading to shifting roles of actors involved in scholarly communication. Their offering is presented as an alternative to commercially oriented publishing, or is a continuation of long-term traditions of institutional and mission-oriented publishing in a new digitally enabled context.
