

enable inclusivity for all authors, regardless of affiliation and funding, and support a healthy diversification in the scholarly publishing ecosystem. Research institutions and their libraries are often involved in their operation. In some countries, they operate at the national level and are frequently supported by national funding agencies. In many cases, such initiatives have evolved into robust and reliable services which enjoy the trust of researchers.

The aim of this topic is to support the cooperation between such not-for-profit publishing services and their editors to enable the flow of knowledge between the European Union and one or more other areas of the world, and in more than one discipline. It is expected that most of the activities of the actions will take place online, and that platforms and other online tools will be used to perform as many of the activities as possible.

The call will fund activities that will:

1. Gather, share and improve good practices with regard to the non-technological aspects of service provision (editorial scopes, peer-review policies, organisation of editorial and publishing business processes, translation, among others), and with regard to business models;
2. Implement practices that will strengthen high-quality publishing services at the global scale so that they are trusted by researchers across countries and disciplines;
3. Develop training materials and organise virtual trainings for not-for-profit publishing service providers and their editors to increase knowledge transfer and dissemination of good practices. The materials should become available in open access.

Applicants are expected to cooperate with projects funded under call topic HORIZON-WIDERA-2021-ERA-01-43: Capacity-building for institutional open access publishing across Europe, and call topic HORIZON-INFRA-2022-EOSC-01-02: Improving and coordinating technical infrastructure for institutional open access publishing across Europe, to ensure synergies and complementarity of outcomes.

Duration: The action should be no longer than 36 months.

HORIZON-WIDERA-2024-ERA-01-09: Support to the development and implementation of policies and practices for reproducibility of scientific results

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions

<i>Eligibility conditions</i>	The conditions are described in General Annex B. The following exceptions apply: Legal entities established in non-associated third countries may exceptionally participate in this Coordination and support action. Due to the scope of this topic, legal entities established in non-associated third countries are exceptionally eligible for Union funding.
-------------------------------	--

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Facilitated development, implementation and monitoring of interventions in research organisations that increase the reproducibility of scientific results;
- More collaboration, joint actions by stakeholders, and mutual learning, notably between national reproducibility networks, to increase reproducibility of scientific results;
- Greater alignment of policies and reduction in disparities between research organisations and between countries in terms of their attention to reproducibility of scientific results;
- Facilitated development and implementation of training programmes and awareness raising.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Increased proportion of reproducible results;
- Increased re-use of scientific results by research and innovation;
- Greater quality of the scientific production.

Scope: Increasing the reproducibility of scientific results, i.e., the possibility for scientists and the scientific community to obtain the same results as the originators, contributes to higher quality and more efficient research processes, more trustworthy results, increasing reuse by other researchers, more effective translation into innovations, and higher return on investments in research (see the scoping report “*Reproducibility of scientific results in the EU*”¹¹⁷).

The aim of this topic is to facilitate the development and implementation of policies and practices, by research performing organisations, research funding organisations, learned societies and publishers that enhance reproducibility of scientific results. The action will support the mutual learning and dissemination of good practices between organisations across the European Union, as well as with relevant organisations outside the European Union, with broad disciplinary representation. It will build expertise and will support research organisations to develop and implement policies and interventions, and will coordinate efforts between stakeholders, notably between existing European national reproducibility networks. The action may facilitate the development of national networks in additional European
