

Evidence from relevant Eurobarometers, and national science barometers, should form particularly important inputs to this action.

The action should involve a broad range of potential users and stakeholders and the general public in co-creation (e.g. civil society, businesses, research/academia, public authorities and policy makers), develop policy guidance and recommendations, and implement innovative means of communicating and disseminating the findings and messages. As such, Responsible Research and Innovation could be a relevant research approach. Close co-operation should be sought with relevant projects to encourage uptake and early sharing of knowledge and evidence.

HORIZON-WIDERA-2021-ERA-01-45: Support to changes in the assessment of research and researchers to reward the practice of open science

Specific conditions	
<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 2.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 2.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following expected outcomes:

- Consolidated information on initiatives for reforming the assessment of research and researchers, taking better account of open science practice⁴⁷.
- Connection of existing initiatives at European level, facilitating mutual learning, and stimulating consensus building among the stakeholders.
- Pilots on new metrics, methods and institutional changes for reforming the assessment of research and researchers, which lead to better rewarding the practice of open science, as well as related issues such as gender equality, science education, and academia-industry collaboration.

These targeted outcomes in turn contribute to medium and long-term impacts:

- Researchers incentivised to practice open science.
- Increased impact of open science.

⁴⁷ Open science practices include: providing open access to research outputs (such as publications, data, software, models, algorithms, and workflows); early and open sharing of research (for example through preregistration, registered reports, pre-prints, crowd-sourcing of solutions to a specific problem); participation in open peer-review; measures to ensure reproducibility of results; and involving citizens, civil society and end-users in the co-creation of R&I agendas and content, including citizen science.
