

- Networking activities for institutions and people engaged in the R&I foresight community as well as potential users and stakeholders of foresight. This could be workshops, seminars, programmes, guidelines, methodology toolboxes, training modules, annual conferences, common social media platforms, network services and infrastructures (e.g., a database of science and technology experts who are interested in futures' intelligence, which could be used for Delphi surveys, scenario building, horizon scanning etc.);
- Development and practical application of the network in pilot foresight projects on topics of common interest, which are linked to ERA Policy Agenda Actions, possibly in coordination with the ERA Forum;
- Participatory approaches and engaging with citizens for foresight across Europe, as well as activities promoting futures literacy should play a core role in order to exploit foresight to the full;
- A network of national agencies on foresight and R&I (including foresight units in ministries and government institutions) should lie at the core of the action and at the core of Europe's R&I foresight community, covering as many member states and countries associated with Horizon Europe as possible.

The European R&I foresight community should build on, and valorise and disseminate results from, foresight projects funded as part of Horizon 2020 and in Horizon Europe including the foresight work done by the JRC: The community will be supported by a principally publicly accessible online platform, providing common resources, further development of training, mutual exchange, and joint foresight work on topics of common interest amongst Europe's R&I policy-makers. Developing a model for the governance and financial sustainability of the network and platform is part of the task, as is a sound European programme on foresight methodologies, resources and activities that will inform the policies shaping the future of science, technology and innovation across the European Union and interested Horizon Europe participating countries.

TRANSLATING R&I RESULTS INTO THE ECONOMY

The Council has asked the Commission to develop a strategy to accelerate the potential uptake of research and innovation results and data. The recent ERA Communication calls for the valorisation of research results with citizens at the forefront; people expect science to be a driving force that will support the transition towards a greener and fairer society and economy.

Proposals are invited against the following topic(s):

HORIZON-WIDERA-2023-ERA-01-03: Experimentation and exchange of good practices for value creation

Specific conditions

<i>Expected EU contribution per project</i>	The Commission estimates that an EU contribution of around EUR 1.00 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
<i>Indicative budget</i>	The total indicative budget for the topic is EUR 3.00 million.
<i>Type of Action</i>	Coordination and Support Actions

Expected Outcome: Projects are expected to contribute to the following outcomes:

- Value creation and transfer to the economy and society by increased interlinkages and cooperation between knowledge valorisation actors (academia/research; industry/SMEs; public administration/policy-makers and society/citizens) in line with ERA Policy Agenda action 7;
- New solutions to societal and economic challenges by stronger uptake and deployment of research results, including through the involvement of citizens and civil society;
- Improvements of structures, strategies, practices and skills for knowledge valorisation through sustainable reforms and new initiatives.

Scope: To emerge stronger from the pandemic and address the challenges we are facing, such as climate change, and enable the twin transition, Europe needs to translate available scientific knowledge and research results to innovative solutions, including technological as well as non-technological and social innovations, in the market, in society and for better policy making. To bring existing good practices in knowledge valorisation to support value creation across Europe, we need more experimentation, peer learning and testing of new models as well as trying out good practices in different environments.

Replication and adaptation of best practices is a powerful way to support the design, implementation and evaluation of knowledge valorisation investments and measures that enhance the quality and extent of knowledge uptake at all levels. It involves identifying and taking inspiration from best practices developed across Europe, engaging in an exchange of experiences with peers and connecting to new partners, as well as driving and supporting the set-up of new measures or the reform of existing ones. Cross-border transfer of best practices in knowledge valorisation is challenging because the corresponding strategies, initiatives or tools need to be adapted to a different context and legal and financial framework and take into account skills and competences.

Researchers can play an important role in engaging citizens and communities through creative interactions. This can contribute to making research results more adapted to the needs of citizens and communities, and strengthen the uptake of research by society benefitting both the research communities and the citizens as users and co-creators.

Proposals should address at least one of the following challenges:
